Conférence Moshé Flato 1999 Giuseppe Dito, Daniel Sternheimer, 2000-07-31 These two volumes constitute the Proceedings of the Conf rence Mosh Flato 1999 Their spectrum is wide but the various areas covered are in fact strongly interwoven by a common denominator the unique personality and creativity of the scientist in whose honor the Conference was held and the far reaching vision that underlies his scientific activity With these two volumes the reader will be able to take stock of the present state of the art in a number of subjects at the frontier of current research in mathematics mathematical physics and physics Volume I is prefaced by reminiscences of and tributes to Flato s life and work It also includes a section on the applications of sciences to insurance and finance an area which was of interest to Flato before it became fashionable The bulk of both volumes is on physical mathematics where the reader will find these ingredients in various combinations fundamental mathematical developments based on them and challenging interpretations of physical phenomena Audience These volumes will be of interest to researchers and graduate students in a variety of domains ranging from abstract mathematics to theoretical physics and other applications Some parts will be accessible to proficient undergraduate students and even to persons with a minimum of scientific knowledge but enough curiosity

Quantization, Geometry and Noncommutative Structures in Mathematics and Physics Alexander Cardona, Pedro Morales, Hernán Ocampo, Sylvie Paycha, Andrés F. Reyes Lega, 2017-11-06 This monograph presents various ongoing approaches to the vast topic of quantization which is the process of forming a quantum mechanical system starting from a classical one and discusses their numerous fruitful interactions with mathematics The opening chapter introduces the various forms of quantization and their interactions with each other and with mathematics A first approach to quantization called deformation quantization consists

of viewing the Planck constant as a small parameter This approach provides a deformation of the structure of the algebra of classical observables rather than a radical change in the nature of the observables When symmetries come into play deformation quantization needs to be merged with group actions which is presented in chapter 2 by Simone Gutt The noncommutativity arising from quantization is the main concern of noncommutative geometry Allowing for the presence of symmetries requires working with principal fiber bundles in a non commutative setup where Hopf algebras appear naturally This is the topic of chapter 3 by Christian Kassel Nichols algebras a special type of Hopf algebras are the subject of chapter 4 by Nicol s Andruskiewitsch The purely algebraic approaches given in the previous chapters do not take the geometry of space time into account For this purpose a special treatment using a more geometric point of view is required An approach to field quantization on curved space time with applications to cosmology is presented in chapter 5 in an account of the lectures of Abhay Ashtekar that brings a complementary point of view to non commutativity An alternative quantization procedure is known under the name of string theory In chapter 6 its supersymmetric version is presented Superstrings have drawn the attention of many mathematicians due to its various fruitful interactions with algebraic geometry some of which are described here The remaining chapters discuss further topics as the Batalin Vilkovisky formalism and direct products of spectral triples This volume addresses both physicists and mathematicians and serves as an introduction to ongoing research in very active areas of mathematics and physics at the border line between geometry topology algebra and quantum field theory

Deformation Theory and Quantum Groups with Applications to Mathematical Physics Murray

Gerstenhaber,1992 Quantum groups are not groups at all but special kinds of Hopf algebras of which the most important are closely related to Lie groups and play a central role in the statistical and wave mechanics of Baxter and Yang Those occurring physically can be studied as essentially algebraic and closely related to the deformation theory of algebras commutative Lie Hopf and so on One of the oldest forms of algebraic quantization amounts to the study of deformations of a commutative algebra A of classical observables to a noncommutative algebra A_h of operators with the infinitesimal deformation given by a Poisson bracket on the original algebra A This volume grew out of an AMS IMS SIAM Joint Summer Research Conference held in June 1990 at the University of Massachusetts at Amherst The conference brought together leading researchers in the several areas mentioned and in areas such as q special functions which have their origins in the last century but whose relevance to modern physics has only recently been understood Among the advances taking place during the conference was Majid s reconstruction theorem for Drinfel d s quasi Hopf algebras Readers will appreciate this snapshot of some of the latest developments in the mathematics of quantum groups and deformation theory

Deformation Quantization Gilles

Halbout,2002 This book contains eleven refereed research papers on deformation quantization by leading experts in the respective fields These contributions are based on talks presented on the occasion of the meeting between mathematicians and theoretical physicists held in Strasbourg in May 2001 Topics covered are star products over Poisson manifolds

quantization of Hopf algebras index theorems globalization and cohomological problems Both the mathematical and the physical approach ranging from asymptotic quantum electrodynamics to operads and prop theory will be presented Historical remarks and surveys set the results presented in perspective Directed at research mathematicians and theoretical physicists as well as graduate students the volume will give an overview of a field of research that has seen enormous activity in the last years with new ties to many other areas of mathematics and physics

Quantum Theory and Symmetries Heinz Dietrich Doebner, 2000 This volume gives an overview of the recent representative developments in relativistic and non relativistic quantum theory which are related to the application of various mathematical notions of various symmetries These notions are centered upon groups algebras and their generalizations and are applied in interaction with topology differential geometry functional analysis and related fields The emphasis is on results in the following areas foundation of quantum physics quantization methods nonlinear quantum mechanics algebraic quantum field theory gauge and string theories discrete spaces quantum groups and generalized symmetries

Quantum Theories and Geometry M. Cahen, M. Flato, 2012-12-06 This book presents the text of most of the lectures which were delivered at the Meeting Quantum Theories and Geometry which was held at the Fondation Les Treilles from March 23 to March 27 1987 The general aim of this meeting was to bring together mathematicians and physicists who have worked in this growing field of contact between the two disciplines namely this region where geometry and physics interact creatively in both directions It is the strong belief of the organizers that these written contributions will be a useful document for research people working in geometry or physics Three lectures were devoted to the deformation approach to quantum mechanics which involves a modification of both the associative and the Lie structure of the algebra of functions on classical phase space A Lichnerowicz shows how one can view classical and quantum statistical mechanics in terms of a deformation with a parameter inversely proportional to temperature S Gutt reviews the physical background of star products and indicates their applications in Lie groups representation theory and in harmonic analysis D Arnal gives a rigorous theory VII viii PREFACE of the star exponential in the case of the Heisenberg group and shows how this can be extended to arbitrary nilpotent groups

Quantum Theory, Groups, Fields and Particles P. Barut, 1983-02-28 Symmetry and Dynamics have played sometimes dualistic sometimes complimentary but always a very essential role in the physicist's description and conception of Nature These are again the basic underlying themes of the present volume It collects self contained introductory contributions on some of the recent developments both in mathematical concepts and in physical applications which are becoming very important in current research So we see in this volume on the one hand differential geometry group representations topology and algebras and on the other hand particle equations particle dynamics and particle interactions Specifically this book contains a complete exposition of the theory of deformations of symplectic algebras and quantization expository material on topology and geometry in physics and group representations On the more physical side we have studies on the concept of particles on conformal spinors of Cartan on

gauge and supersymmetric field theories and on relativistic theory of particle interactions and the theory of magnetic resonances The contributions collected here were originally delivered at two Meetings in Turkey at Blacksea University in Trabzon and at the University of Bosphorus in Istanbul But they have been thoroughly revised updated and extended for this volume It is a pleasure for me to acknowledge the support of UNESCO the support and hospitality of Blacksea and Bosphorus Universities for these two memorable Meetings in Mathematical Physics and to thank the Contributors for their effort and care in preparing this work

Quantum Theory and Symmetries M. B. Paranjape, Richard MacKenzie, Zora

Thomova, Pavel Winternitz, William Witczak-Krempa, 2022-03-29 This volume of the CRM Conference Series is based on a carefully refereed selection of contributions presented at the 11th International Symposium on Quantum Theory and Symmetries held in Montr al Canada from July 1 5 2019 The main objective of the meeting was to share and make accessible new research and recent results in several branches of Theoretical and Mathematical Physics including Algebraic Methods Condensed Matter Physics Cosmology and Gravitation Integrability Non perturbative Quantum Field Theory Particle Physics Quantum Computing and Quantum Information Theory and String ADS CFT There was also a special session in honour of Decio Levi The volume is divided into sections corresponding to the sessions held during the symposium allowing the reader to appreciate both the homogeneity and the diversity of mathematical tools that have been applied in these subject areas Several of the plenary speakers who are internationally recognized experts in their fields have contributed reviews of the main topics to complement the original contributions
