Conjuring Science : Scientific Symbols and Cultural Meanings in American Life Christopher P. Toumey, 1996

Conjuring Science Sofie Lachapelle, 2015-10-07 *Conjuring Science* explores the history of magic shows and scientific entertainment. It follows the frictions and connections of magic and science as they occurred in the world of popular entertainment in France from the mid eighteenth to the early twentieth century. It situates conjurers within the broader culture of science and argues that stage magic formed an important popular conduit for science and scientific enthusiasm during this period. From the scientific recreations of the fairs to the grand illusions of the theatre stage and the development of early cinema, conjurers used and were inspired by scientific and technological innovations to create illusions that provoke a sense of wonder and often even instruct their audience. In their hands, science took on many meanings and served different purposes: it was a set of pleasant facts and recreational demonstrations upon which to draw; it was the knowledge presented in various scientific lectures accompanied by optical projections; at magic shows, it was the techniques necessary to create illusions and effects on stage and later on at the cinema; and it was a way to separate conjuring from the deceit of mediums, mystical showmen and quacks in order to gain a better standing within an increasingly scientifically minded society.

Science Studies David J. Hess, 1997-10 The first comprehensive survey of the nascent field of science studies. Thrust into the public eye by the contentious Science Wars played out most recently by physicist Alan Sokal's hoax, the nascent field of science studies takes on the political, historical and cultural dimensions of technology and the sciences. *Science Studies* is the first comprehensive survey of the field combining a concise overview of key concepts with an original and integrated framework. In the process of bringing disparate fields together under one tent, David J. Hess realizes the full promise of science studies long uncomfortably squeezed into traditional disciplines. He provides a clear discussion of the issues and misunderstandings that have arisen in these interdisciplinary conversations. His survey is up to date and includes recent developments in philosophy, sociology, anthropology, history, cultural studies and feminist studies. By moving from the discipline-bound blinders of a sociology, history, philosophy or anthropology of science to a transdisciplinary field, science studies, Hess argues, will be able to provide crucial conceptual tools for public discussions about the role of science and technology in a democratic society.

Voodoo Science Robert L. Park, 2002 Occasionally in the world of science, unexpected results that appear to violate accepted laws of nature can herald revolutionary advances in human knowledge. Many of these revolutionary discoveries do, however, turn out to be wrong, and eminent scientists must carry the burden of a tarnished reputation for mistakenly thinking they have made a great discovery. In this entertaining text, Robert Park examines the social, economic and political forces that elicit or support flawed or fake science and then go on to sustain it in the face of often overwhelming contrary evidence. Readers are made aware of the fine line that exists between foolishness and fraud and are warned against irrational beliefs dressed up as scientific garb.

Indigo Plantations and Science in Colonial India

Prakash Kumar,2012-08-27 Prakash Kumar documents the history of agricultural indigo exploring the effects of nineteenth century globalization on a colonial industry in South Asia Kumar discusses how the knowledge of indigo culture thrived among peasant traditions on the Indian subcontinent in the early modern period Caribbean planters and French naturalists then developed and codified this knowledge into widely disseminated texts European planters who began to settle in Bengal with the establishment of British rule in the third quarter of the eighteenth century drew on this network of information Through the nineteenth century indigo culture in Bengal became more modern science based and expert driven When a cheaper and purer synthetic indigo was created in 1897 the planters and the colonial state established laboratories to find ways to cheapen the cost of the agricultural dye and improve its purity This indigo science crossed paths with the colonial state s effort to develop a science for agricultural development For two decades natural indigo survived the competition of the industrial substitute The indigo industry s optimism faded only at the end of the First World War when German proprietary knowledge of synthetic indigo became widely available and the industrial use of synthetic indigo for textile dyeing and printing became almost universal

Civilization and the Culture of Science Stephen Gaukroger,2020-02-19 How did science come to have such a central place in Western culture How did cognitive values and subsequently moral political and social ones come to be modelled around scientific values In Civilization and the Culture of Science Stephen Gaukroger explores how these values were shaped and how they began in turn to shape those of society The core nineteenth and twentieth century development is that in which science comes to take centre stage in determining ideas of civilization displacing Christianity in this role Christianity had provided a unifying thread in the study of the world however and science had to match this which it did through the project of the unity of the sciences The standing of science came to rest or fall on this question which the book sets out to show in detail is essentially ideological not something that arose from developments within the sciences which remained pluralistic and modular A crucial ingredient in this process was a fundamental rethinking of the relations between science and ethics economics philosophy and engineering In his engaging description of this transition to a scientific modernity Gaukroger examines five of the issues which underpinned this shift in detail changes in the understanding of civilization the push to unify the sciences the rise of the idea of the limits of scientific understanding the concepts of applied and popular science and the way in which the public was shaped in a scientific image

Cultural Boundaries of Science Thomas F. Gieryn,1999-01-15 This text argues that an explanation for the cultural authority of science lies where scientific claims leave laboratories and enter boardrooms and living rooms Here one uses maps to decide who to believe cultural maps demarcating science from pseudoscience ideology faith or nonsense

Research in Science Education in Europe M. Bandiera,1999-04-30 This volume gives an account of the most recent

results of research in science education in Europe based on a selection of papers presented at the First Conference of the European Science Education Research Association held in Rome at the end of 1997 It is an overview of the trends in the different disciplines such as biology chemistry earth science and physics as well as in more general subjects such as science and society teachers training teaching and learning Compared to the real situation it is a balanced picture adjusted to include similar contributions from all European countries and different fields of research in science education Consequently it offers a comparative view of the research activity in countries with different traditions In these times when all countries have to face problems arising from some inadequacies of their own education systems in relation to the changes that are occurring both at social and technological levels this book represents a rich and diverse source which can be a starting point of action and reflection for the main actors in the educational system researchers policy makers and teachers

Introducing the Chemical Sciences Chemical Heritage Foundation,1997 An introductory guide that is designed particularly for teachers and their students but is useful in many other contexts This new edition lists reference works histories of science and technology histories of the chemical sciences and industries including company histories autobiographies and biographies edited classical texts and journals

The Routledge Research Companion to Nineteenth-Century British Literature and Science John Holmes,Sharon Ruston,2017-05-18 Tracing the continuities and trends in the complex relationship between literature and science in the long nineteenth century this companion provides scholars with a comprehensive authoritative and up to date foundation for research in this field In intellectual material and social terms the transformation undergone by Western culture over the period was unprecedented Many of these changes were grounded in the growth of science Yet science was not a cultural monolith then any more than it is now and its development was shaped by competing world views To cover the full range of literary engagements with science in the nineteenth century this companion consists of twenty seven chapters by experts in the field which explore crucial social and intellectual contexts for the interactions between literature and science how science affected different genres of writing and the importance of individual scientific disciplines and concepts within literary culture Each chapter has its own extensive bibliography The volume as a whole is rounded out with a synoptic introduction by the editors and an afterword by the eminent historian of nineteenth century science Bernard Lightman

English Mechanic and World of Science ,1873 *Communicating Science* Eileen Scanlon,Roger Hill,Kirk Junker,1999 This volume traces the modern critical and performance history of this play one of Shakespeare s most loved and most performed comedies The essay focus on such modern concerns as feminism deconstruction textual theory and queer theory

Handbook of Public Policy Analysis Frank Fischer,Gerald J. Miller,2017-09-25 The study of public policy and the methods of policy analysis are among the most rapidly developing areas in the social sciences Policy analysis has emerged to provide a better understanding of the policymaking process and to supply decision makers with reliable policy relevant knowledge about pressing economic and social problems Presenting a broad comprehensive perspective the Handbook of

Public Policy Analysis Theory Politics and Methods covers the historical development of policy analysis its role in the policy process and empirical methods The handbook considers the theory generated by these methods and the normative and ethical issues surrounding their practice Written by leading experts in the field this book Deals with the basic origins and evolution of public policy Examines the stages of the policy making process Identifies political advocacy and expertise in the policy process Focuses on rationality in policy decision making and the role of policy networks and learning Details argumentation rhetoric and narratives Explores the comparative cultural and ethical aspects of public policy Explains primary quantitative oriented analytical methods employed in policy research Addresses the qualitative sides of policy analysis Discusses tools used to refine policy choices Traces the development of policy analysis in selected national contexts

The Handbook of Public Policy Analysis Theory Politics and Methods describes the theoretical debates that have recently defined the field including the work of postpositivist interpretivist and social constructionist scholars This book also explores the interplay between empirical and normative analysis a crucial issue running through contemporary debates Sacred Bovines Douglas Allchin, 2017 This book is a collection of short essays each challenging a commonplace assumption about biology playfully dubbed Sacred Bovines *Science Education: Science, education, and the formal curriculum* John K. Gilbert, 2006 Udvalgte artikler fra 1985 2005 fordelt p 8 temaer The relationship between science and science education Aims of the formal science curriculum and the needs of the students Science education in the formal curriculum Assessment in formal science education Teaching in science education Learning in science education The conceptual development of students in science education The professional development of science teachers **Islamicate Occult Sciences in Theory and Practice** , 2020-11-16 Islamicate Occult Sciences in Theory and Practice brings together the latest research on Islamic occult sciences from a variety of disciplinary perspectives namely intellectual history manuscript studies and material culture Its aim is not only to showcase the range of pioneering work that is currently being done in these areas but also to provide a model for closer interaction amongst the disciplines constituting this burgeoning field of study Furthermore the book provides the rare opportunity to bridge the gap on an institutional level by bringing the academic and curatorial spheres into dialogue Contributors include Charles Burnett Jean Charles Coulon Maryam Ekhtiar Noah Gardiner Christiane Gruber Bink Hallum Francesca Leoni Matthew Melvin Koushki Michael Noble Rachel Parikh Liana Saif Maria Subtelny Farouk Yahya and Travis Zadeh *Media Archaeology and Intermedial Performance* Nele Wynants, 2018-12-30 This book develops media archaeological approaches to theatre and intermediality As an age old art form theatre has always embraced new media To create theatrical effects and optical illusions theatre makers were ready to integrate state of the art technics and technologies and by doing so they playfully explored and popularized scientific knowledge on mechanics optics and sound for live audiences This book highlights this obvious but often overlooked relation between media developments and the history of intermedial theater By considering the interplay between present intermedial performances and their archaeological traces

the authors assembled here revisit old and often forgotten media approaches and theatre technologies This archaeology is understood less as the discovery of a forgotten past than as the establishment of an active relationship between past and present Rather than treating archaeological remains as representative tokens of a fragmented past that need to be preserved the authors stress the return of the past in the present but in a different performative guise
