Scheduling, and Control in Construction Calin M. Popescu, Chotchai Charoenngam, 1995-03-20 Critical Path Method CPM and Performance Evaluation and Review Technique PERT are widely recognized as the most effective methods of keeping large complex construction projects on schedule under budget and up to professional standards. But these methods remain underused because they are poorly understood and due to a host of unfamiliar terms and applications may seem more complicated than they really are. This encyclopedia brings together in one comprehensive volume all terms definitions and applications related to the time and cost management of construction projects. While many of these terms refer to ancient and venerable building practices others have evolved quite recently and refer specifically to modern construction and management techniques. Sources include hundreds of professional books, trade journals and research publications as well as planning and scheduling software vendor literature. The detailed glossary of all applicable terms includes across referenced listing of examples that describe real world applications for each term supplied. An extensive bibliography covers all applicable books, articles and periodicals available on project planning, scheduling and control using CPM and related subjects. This book is an important quick reference and desktop information resource for construction planners, schedulers and controllers as well as civil engineers and project managers. It is also the ultimate research tool for educators, students or anyone who seeks to improve their understanding of the management of modern construction projects.

revised edition contains 18 chapters which have been divided into five parts Introducing Construction Project Management Developing a Project Construction Time Schedule Developing Project Resources Plans Planning and Budgeting Construction Costs Controlling Project Construction PlanAll the existing chapters have been revised and updated The most salient of these are Construction Scope Scenario in International and National Levels Planning and Controlling Work Scope and Its Integration Processes Defining and Networking Project Acitivity Scheduling Construction Project Work and Resources Forecasting Physical Resources of Men Materials and Equipment Planning and Budgeting Costs and Developing Financial Statements Controlling Product Quality and Workers Safety Controlling Costs and Earned Value Management Reducing Project Time and Cost Using Critical Chain Management Managing Risks at Construction Sites Emerging Trends in Project Management Information System An Interactive Visual Approach to Construction Project Scheduling Anamika Sharma,2009 Sound project management is an important pillar of success for a construction company Project schedules are the primary tools for communicating the thinking and planning by the management team to all the stakeholders in a construction project Traditional project scheduling software have become an indispensable tool for managers in various project oriented industries for tracking the schedule the budget and resource requirements of a project as well as for preparing reports providing on line access to project information and communication with the members of the project team However these benefits are realized only after the project information is entered into the computer and updated periodically Setting up a computer schedule for a construction project requires entering into the computer not only all project activities and their durations and resource requirements but also organizing and sequencing of project activities This requires considerable time and effort and consequently a full scale time study is not usually performed for all projects New parametric CAD software is revolutionizing the way architects engineers and contractors work and can significantly increase construction management productivity by substantially reducing the manual work necessary for computerized construction scheduling The data model of new parametric CAD software allows easy exchange of building design information among various software systems during design construction and service life of projects Research is underway at Marquette University to investigate how new parametric CAD software such as Autodesk Revit can improve construction scheduling and project control functions The main objective of the research is to find a simple and intuitive way for transferring the necessary project information from an architectural CAD model to scheduling software and streamlining sequencing and organizing project activities Achieving this objective will eliminate one of the most tedious and time consuming steps in creating a construction project schedule The study proposes a visual approach to extracting project information and transferring them to scheduling software In this approach first a 3D model of the project is created using project s digital Revit CAD files Extraction organizing sequencing and transferring of project elements to scheduling software is performed during a walkthrough of the 3D model During a walkthrough the user can select a building element by pointing to the

element This capability allows the user to select both an element and its predecessors before executing a command that sends the information to the scheduling program This approach reduces the tedious task of listing organizing sequencing and transferring construction project information to scheduling software to a simple expedition inside the building
