Science Education and Culture Fabio Bevilacqua, Enrico Giannetto, Michael Matthews, 2012-12-06

This anthology contains selected papers from the Science as Culture conference held at Lake Como and Pavia University Italy 15-19 September 1999. The conference, attended by about 220 individuals from thirty countries, was a joint venture of the International History Philosophy and Science Teaching Group, its fifth conference, and the History of Physics and Physics Teaching Division of the European Physical Society, its eighth conference. The magnificent Villa Olmo on the lakeshore provided a memorable location for the presenters of the 160 papers and the audience that discussed them. The conference was part of local celebrations of the bicentenary of Alessandro Volta's creation of the battery in 1799. Volta was born in Como in 1745 and for forty years from 1778 he was professor of experimental physics at Pavia University. The conference was fortunate to have had the generous financial support of the Italian government's Volta Bicentenary Fund, Lombardy region, Pavia University, Italian Research Council, and Kluwer Academic Publishers. The papers included here have or will be published in the journal *Science Education*, the inaugural volume 1992 of which was a landmark in the history of science education publication because it was the first journal in the field devoted to contributions from historical, philosophical, and sociological scholarship. Clearly, these foundational disciplines inform numerous theoretical, curricular, and pedagogical debates in science education. Contemporary Concerns: The research promoted by the International and European Groups and by the journal is central to science education programmes in most areas of the world.

Under development for five years, this work encompasses over 1,000 articles across 24 individual areas of coverage and is expected to become the dominant resource in the field. Education is a multidisciplinary and international field, drawing on a wide range of social sciences and humanities disciplines, and this new edition comprehensively matches this diversity. The diverse background and multidisciplinary subject coverage of the Editorial Board ensure a balanced and objective academic framework, with 1,500 contributors representing over 100 countries, capturing a complete portrait of this evolving field. A totally new work, revamped with a wholly new editorial board structure and brand new list of meta-sections and articles, developed by an international panel of editors and authors drawn from senior academia. Web-enhanced with supplementary multimedia audio and video files hotlinked to relevant references and sources for further study. Incorporates ca. 1,350 articles with timely coverage of such topics as technology and learning, demography, and social change, globalization, and adult learning, to name a few. Offers two content delivery options: print and online, the latter of which provides anytime, anywhere access for multiple users and superior search functionality via ScienceDirect, as well as multimedia content including audio and video files.

Philosophy, Science, Education and Culture Robert Nola, Gürol

Irzik,2006-02-22 Currents such as epistemological and social constructivism postmodernism and certain forms of multiculturalism that had become fashionable within science education circles in the last decades lost sight of critical inquiry as the core aim of education In this book we develop an account of education that places critical inquiry at the core of education in general and science education in particular Since science constitutes the paradigm example of critical inquiry we explain the nature of science paying particular attention to scientific methodology and scientific modeling and at the same time showing their relevance in the science classroom We defend a universalist rationalist and objectivist account of science against epistemological and social constructivist views postmodernist approaches and epistemic multiculturalist accounts

Time for Science Education Michael Matthews,2012-12-06 The book's argument depends as do most proposals in education upon certain positions in the philosophy of education I believe that education should be primarily concerned with developing understanding with initiation into worthwhile traditions of intellectual achievement and with developing capacities for clear analytic and critical thought These have been the long accepted goals of liberal education In a liberal education students should come to know and appreciate a variety of disciplines know them at an appropriate depth see the interconnectedness of the disciplines or the modes of thought and finally have some critical disposition toward what is being learned to be genuinely open minded about intellectual things These liberal goals are contrasted with goals such as professional training job preparation promotion of self esteem social engineering entertainment or countless other putative purposes of schooling that are enunciated by politicians administrators and educators The book's argument might be consistent with other views of education especially ones about the training of specialists sometimes called a professional view of education but the argument fits best with a liberal view of education The liberal hope has always been that if education is done well then other personal and social goods will follow The development of informed critical and moral capacities is the cornerstone for personal and social achievements
