intention of the book is to reflect how far integrated science teaching had spread around the world. The chapters in the first part of this book describe key issues in integrated science and broad trends in the approaches to integrated science teaching worldwide. They include the conclusions of five working groups set up during the meeting to discuss the key issues in the following areas: 1 content developments in science and technology and their implications for science education; 2 curriculum and resource materials; 3 teaching, learning and assessment; 4 equipment and science teaching facilities; and 5 teacher education. The following articles are included in eight chapters of Part I: What Is Integrated Science Teaching: Its Beginnings and Its Place Today (Dennis G. Chisman); Reflections on the Development of Integrated Science Teaching Projects for 4-16 Year Olds (Kersti Th. Boersma and others); The Integration of Science Teaching through Science Technology Society Courses (John Holman); and Teacher Behaviours Which Facilitate Integrated Science Teaching (Ronald J. Bonnstetter). The second part of the book describes national and regional developments in the teaching of integrated science in Africa, the Arab States, Asia and the South Pacific, Europe and North America, Latin America and the Caribbean, and is based largely on the reports and discussions at the meeting. The third part contains some examples of topics and modules of integrated science courses taken from recent courses in Botswana, the Caribbean, the Netherlands, the Philippines, Sierra Leone and the United Kingdom. The fourth part is an annotated bibliography of over 370 entries which attempts to sample literature relevant to integrated science.

Conversations around diversity, equity and inclusion in science communication are in danger of generating much concern without effecting change and systematic transformations. This radical volume addresses these circular discourses and reveals the gaps in the field. Putting the spotlight on the marginalised voices of so-called racialised minorities and those from Global South regions, it interrogates the global footprint of the science communication enterprise. Moving beyond tokenistic and extractive approaches, this book creates a space for academics and practitioners to challenge issues around race and sociocultural inclusion, providing mutual learning, paradigm shifting, perspectives and innovative ways forward for the science communication advancement agenda. This work has received Special Recognition from the CIMUSET Award Committee.
