field from the inimitable Feynman      *The Lancet* ,1896      **PSYCHOLOGY** B. K. MISHRA,2008-11-05 Though psychology is a comparatively younger subject as compared to allied subjects like Philosophy Anthropology and Sociology recent years have witnessed remarkable strides in its study Indeed writings on the subject have been both prodigious and prolific because of the enormous interest evinced by those interested in psychology and because human behaviour both complex and simple is such a fascinating subject for study and research This accessible and student friendly text shows the what why and how of human behaviour patterns The text emphasizes controlled and systematic studies to explain such behavioural aspects as sensing perceiving modifications of human behaviour memorizing the recollection of past events and affecting processes The text is interspersed with many examples to illustrate the concepts discussed The concepts are well supported with experimental as well as observational facts What s more the book acquaints the reader with the recent advances in the field of psychology KEY FEATURES Liberal use of examples to give a clear idea of the concept discussed Step by step analysis of various psychological facts to facilitate better understanding of the subject Presentation of new advances and discoveries in the field of various psychological processes Glossary of terms besides chapter end exercises and summaries Primarily intended as a text for undergraduate students of psychology the book can also be profitably used by postgraduate students and all those who have an abiding interest in the study of human behaviour      **Outdoor Lighting: Physics, Vision and Perception** Duco Schreuder,2008-08-15 The present book is based on the experience of the author The experience is mainly the result of years of research of consulting work and in participation in policy decision making in many fields most but not all related to outdoor lighting To some degree the book represents the preference of the author The selection of the subjects is based on more than 50 years of experience of what is desirable to know for persons engaged in scientific research or practical application in the fields of lighting and vision The subjects deal with a number of fundamental aspects The theorists must have them at their fingertips whereas the practical engineers may assume them as known in their daily work The selection of subjects is based in part by the questions that came to the author over the years but even more by the preference of the author himself In this respect it is a personal book Thus it should be stressed that the book is not a handbook or even a textbook many subjects that commonly are treated in such books are not included here Not because they lack importance but because the author feels that they are adequately treated elsewhere Some relevant works are mentioned in the References Over the years the author has been engaged in giving courses on vision and lighting lately more in particular on Masterclasses on a post graduate or post doctorate level      [Index-catalogue of the Library ...](#) Library of the Surgeon-General's Office (U.S.),1961
