

BATTERY

Battery Cycle

The electric golf car storage battery receives, stores and delivers electrical power. The battery does not manufacture electricity. It merely stores it in chemical form for later use. This receiving, storing and delivering of electrical power is called a cycle.

Receive	—	Charging car batteries
Store	—	Car standing idle
Deliver	—	Driving car

Batteries furnished for electric golf car operation are specially constructed for this type of service.

Golf Car Battery

Automotive batteries are designed to furnish high current draws for short durations, and are kept in a near fully charged state by the charging system. Electric car batteries must be able to furnish currents up to 50 amperes for long durations, and also be able to supply that current while in a partially discharge condition. This type of service requires a deep cycle battery — a battery that is durable enough to withstand repeated complete cycling. For this reason golf car batteries are constructed with heavier plates, and cells with a greater capacity for electrolyte.

CAUTION

Only batteries designed for electric golf car service should be used.

WARNING

Batteries contain sulphuric acid, which is highly corrosive and can cause chemical burns. Avoid contact with skin, eyes or clothing. Always wear approved eye protection when working around batteries.

ANTIDOTE

External — Flush with water.

Internal — Drink large quantities of milk or water, followed by Milk of Magnesia, vegetable oil or beaten eggs. **CALL DOCTOR IMMEDIATELY.**

Eyes — Flush with water, get immediate medical attention.

BATTERY INSTALLATION AND CONNECTION

Batteries are installed and connected in the golf car

Follow procedure outlined in BATTERY CARE after installing batteries.

BATTERY CARE

Visual Inspection and Maintenance

Batteries should be carefully inspected every week, 6 hours operating time, or every 10 rounds of play. This procedure should also be followed before any tests are performed on the batteries.

1. Battery must be clean and dry. Dirt and electrolyte on top of battery causes battery to self-discharge. Clean battery top with baking soda (sodium bicarbonate) and water solution (5 teaspoons baking soda per quart water). Do not allow solution to enter cap vent holes.
2. Inspect battery posts, clamps, and cables for breakage, loose connections and corrosion. Clean posts and clamps.
3. Be sure battery hold downs are properly tightened. A loose hold down may allow the battery to become damaged from vibration or jarring. A hold down that is too tight may buckle or crack the battery case.
