**Dynamic Analysis of Structures for Looms Industry** Jigar Sevalia, Yogesh Rathod, Sunil Kukadiya, Sarthi Bhavsar, 2014-09-26 Bachelor Thesis from the year 2013 in the subject Engineering Civil Engineering grade AA Gujarat University Gujarat Technological University course Final Year Project language English abstract Ever since the existence of mankind it has noticed a remarkable advancement in field of science and technology Traditional hand weaving methods have been replaced by modern and speedy looms machine With faster production rate these machines proved to be a boon for textile manufacturers However they come with an unnoticed problem of vibration Hence there arises a need to study the effects of vibrations on the structural as well as non structural components of the building Here in this project an attempt has been made to study the dynamic behavior of a structure for looms industry subjected to vibration due to operations of looms machine by changing its various parameters With an increase in demand of textile more and more looms machines are being installed every day While designing the structure to house these looms it becomes incumbent upon the designer to curtail the amplitude of vibrations within the permissible limits One must also make sure that the frequency of structure is separated for operating frequency of machine by a good margin so that the Resonance Condition can be avoided The looms machine fall under the category of reciprocating machine and have medium operating speed ranging from 100 rpm to 180 rpm The main source of vibration is the Beating Up motion This generates a Harmonic Load due to the unbalanced force caused by the reciprocating sley movement Hence the designing of structure for looms industry is a complex process which needs prime considerations The cost of dynamic analysis of these structure is paramount hence a small fraction of amount is being spent might lead to inadequately constructed structures which may result in failure and shut downs exceeding many times the cost of the capital investment required for properly designed and built structure Now in such a case by executing parametric study one can decide which parameter out of many is most sensitive to odd results so that by varying those parameters only results can be brought to the required level and do not affect other reliable results An attempt is made in the thesis to carry out a parametric study by using software STAAD Pro Following Parameters are studied in this thesis 1 Sizes of Column 2 Sizes of Beams 3 Story Height 4 Number of Stories Effect of remedial measures like 1 Cross Bracing below Plinth Level 2 Full Length Jacketing of Columns 3 Partial Length Jacketing of Columns 4 Cross Tie Beams 5 Haunches at the Junction

**Decision Loom** Vincent Barabba, 2011-11-30 Decision making has been one of the principal victims of modern thinking The analytical approach has of course brought us vaccines electricity and the internal combustion engine But in seeking to break things down into their component parts and improve the parts governments and businesses continue to make some astonishingly bad decisions What s more many enterprises still pay close attention to decisions and decision making whilst overlooking the bigger picture the organizational system within which those decisions get made This elegant book is a guide for any public private government or non profit organization that needs a system for making better decisions It sets out to

change our analytical habit and invites enterprises to consider the bigger picture Author Vince Barabba presents an elegantly simple approach to making better decisions He calls this approach The Decision Loom and bases it on Systems Thinking Design Thinking and Complexity Theory He also describes the four core capabilities that any organization must put in place for this approach to work What's more because we're humans and prefer stories to instruction manuals the tapestry of the book is embroidered with fascinating examples from the author's lifetime of experience at the head of American corporate and public decision making

**The Dynamics of Victorian Business** Roy Church, 2013-11-05 First Published in 2005 This volume looks at the problems and perspectives of Victorian Business in the 1870s The purpose of this collection of essays is to explore further that part of the thesis tentatively advanced in interrogative mode in 1975 concerning the course of industrial development during the second and third quarters of the nineteenth century *Structure and Effectiveness of the Accumulation Fund of the USSR*. The Land and the Loom Liana Vardi, 1993 In the modern imagination the peasant survives as a creature of the land suspicious of the outside world and resistant to change either the repository of pristine innocence and virtue or the manifestation of everything nasty brutish and at best dull The Land and the Loom replaces this picture with a richly textured deeply researched portrait of the peasant's life and world in northern France in the early modern period Supported by evidence culled from parish registers notarial records and judicial archives this masterful depiction of village life detailing the development of the linen weaving trade in Montigny revises accepted notions of the peasant's place in rural industry The peasants emerging from Liana Vardi's study are not the figures of tradition driven solely by symbolic attachment to the land and unreasonably devoted to village solidarities Instead they reveal remarkable flexibility and diversity a readiness to adapt to changing incentives As Vardi shows they not only improved farming methods and raised yields during the eighteenth century but also used land to finance investments in industry and to develop local business far flung commercial networks and complex credit mechanisms Vardi reveals how the peasant's responses to market opportunities depended largely on their status with the very poor and the well off staying out of the linen business while a broad middle group leaped into the trade setting in motion a gradual shift of wealth and power within the community As this analysis makes clear the importance of patrimony and tradition had much more to do with economic interests and common sense than with deep seated cultural and emotional constraints The eighteenth century French countryside emerges as a region of capitalist experimentation cut short by pre Revolutionary and Revolutionary crises Meticulously documented broadly interpretive and beautifully written this fascinating book will permanently alter conventional perceptions of peasant life and rural industry and ultimately the way

**National Character** Alex Inkeles, 2014-12-03 Seen in modern perspective the concept of national character poses fundamental problems for social science theory and research To what extent do conditions of life in a particular society give rise to certain patterns in the personalities of its members What are the consequences Alex Inkeles surveys various definitions of national character tracing developments through the twentieth century His approach is to examine the regularity of specific personality patterns among individuals in a society He argues that modal personality may be extremely important in determining which new cultural elements are accepted and which institutional forms persist in a society Reviewing previous studies Inkeles canvasses the attitudes and psychological states of different nations in an effort to discover a set of values in the United States He concludes that despite recent advances in the field there is much to be done before we can have a clear picture of the degree of differentiation in the personality structure of modern nations Until now there were few formal definitions and discussions on national character and the limits of this field of study This book will be of great interest to psychologists sociologists philosophers and political theorists
