Dynamics of Complex Intracontinental Basins Ralf Littke,Ulf Bayer,Dirk Gajewski,Susanne Nelskamp,2008-08-11

Sedimentary basins host among others most of our energy and fresh water resources they can be regarded as large geo reactors in which many physical and chemical processes interact Their complexity can only be well understood in well organized interdisciplinary co operations This book documents how researchers from different geo scientific disciplines have jointly analysed the structural thermal and sedimentary evolution as well as fluid dynamics of a complex sedimentary basin system which has experienced a variety of activation and reactivation impulses as well as intense salt tectonics In this book we have summarized our geological geophysical and geochemical understanding of some of the most important processes affecting sedimentary basins in general and our view on the evolution of one of the largest best explored and most complex continental sedimentary basins on Earth The Central European Basin System *Palaeozoic Climate Cycles* A. Gąsiewicz,M. Słowakiewicz,2014-02-03 This volume presents results of a variety of case studies documenting the Late Palaeozoic climate changes and cyclicity of deposition The collected papers cover many aspects related to palaeoenvironmental analysis with sedimentological stratigraphic palaeobiological geochemical and palaeomagnetic studies of the fossil record around the Late Palaeozoic Ice Age and soon after They span a stratigraphic interval from Carboniferous to Permian Triassic transition around the world This book comprising results for a range of disciplines is a valuable source for not only researchers who are actively working on specific aspects of the Late Palaeozoic and looking for an up to date reference on this inhospitable time in the Earth s history It is also of interest to climate modellers and the wider scientific community with an interest in the latest research on the decline of the Palaeozoic World *Mesozoic Resource Potential in the Southern Permian Basin* B. Kilhams,P.A. Kukla,S. Mazur,T. McKie,H.F. Mijndieff,K. van Ojik,2018-08-31 The Southern Permian Basin as its name suggests is a historical heartland for hydrocarbon production from the Palaeozoic Rotliegend interval However in this mature basin the Mesozoic presents further possibilities to offer resource security to NW Europe Such opportunities include increasing efficiency in the production of discovered hydrocarbons exploration for further hydrocarbons both conventional and unconventional and efficient exploration for and production of geothermal energy All these potential resources require a grounding in technically sound geoscience via traditional scientific observation and the application of new technologies to unlock their value The main aim of this volume is to bring together the work of academics and industry workers to consider cross border geoscience including contributions on Poland Germany The Netherlands the United Kingdom and adjacent areas The work presented intends to contribute to the development and discovery of further Mesozoic energy resources across the basin *Fifty Years of the Wilson Cycle Concept in Plate Tectonics* R.W. Wilson,G.A. Houseman,K.J.W. McCaffrey,A.G. Doré,S.J.H. Buiter,2019-11-11 Fifty years ago Tuzo Wilson published his paper asking Did the Atlantic close and then re open This led to the Wilson Cycle concept in which the repeated opening and closing of ocean basins along old orogenic belts is a

key process in the assembly and breakup of supercontinents The Wilson Cycle underlies much of what we know about the geological evolution of the Earth and its lithosphere and will no doubt continue to be developed as we gain more understanding of the physical processes that control mantle convection plate tectonics and as more data become available from currently less accessible regions This volume includes both thematic and review papers covering various aspects of the Wilson Cycle concept Thematic sections include 1 the Classic Wilson v Supercontinent Cycles 2 Mantle Dynamics in the Wilson Cycle 3 Tectonic Inheritance in the Lithosphere 4 Revisiting Tuzo's question on the Atlantic 5 Opening and Closing of Oceans and 6 Cratonic Basins and their place in the Wilson Cycle *The Variscan Belt of Western Europe, Volume 1* Yoann Denele, Julien Berger, 2023-08-22 This book deals with the geological record and the evolution of ideas concerning the Variscan orogenic belt in France and neighboring regions Volume 1 is based on a general introduction concerning the imprint of the Variscan period on the geology of France as well as on the particularities of the study of this ancient orogen A history of the concepts applied to the Variscan belt is proposed in order to consider this orogen in the history of Earth Sciences A paleogeodynamic analysis of the Variscan cycle sets the general framework for the evolution of the orogen which is then tackled through the prism of the magmatic metamorphic and tectonic record of the early phases from Cambrian to Lower Carboniferous Volume 2 proposes an analysis of the late evolution of the Variscan orogenic belt reflecting its dismantling in a high temperature context during the Upper Carboniferous and Permian The sedimentary archives are described as well as the questions raised by the specificities of this ancient orogen **Shale Tectonics** Lesli J. *Characterization and Modeling for Energy Sustainability* M.R. Fassihi, J.P. Blangy, 2022-12-27 The greatest challenge facing humanity today is the transition to a more sustainable energy infrastructure while reducing greenhouse gas emissions Meeting this challenge will require a diversified array of solutions spanning across multiple industries One of the solutions rising to the fore is the potential to rapidly build out carbon sequestration which involves the removal of CO<sub>2</sub> from the atmosphere and its storage in the subsurface *Integrated Aquifer Characterization and Modeling for Energy Sustainability* Key

Lessons from the Petroleum Industry provides a comprehensive and practical technical guide into the potential that aquifers hold as sites for carbon and energy storage. Aquifers occupy a significant part of the Earth's available volume in the subsurface and thus hold immense potential as sites for carbon storage. Many aquifers have been studied extensively as part of oil and gas energy development projects and as such they represent an opportunity to sequester carbon within existing areas of infrastructure that have already been impacted by and integrated into an inherited energy framework. Moreover, future efforts to reconfigure the landscape of our national and global energy systems can extract valuable lessons from this existing trove of data and expertise. From a multidisciplinary perspective, this book provides a valuable and up-to-date overview of how we can draw on the wealth of existing technologies and data deployed by the petroleum industry in the transition to a more sustainable future. Integrated Aquifer Characterization and Modeling for Energy Sustainability will be of value to academic, professional, and business audiences who wish to evaluate the potential underground storage of carbon and/or energy and for policy makers in developing the right policy tools to further the goals of a sustainable energy transition.

CLEAN Michael Kühn, Ute Münch, 2012-12-14 The project CLEAN CO<sub>2</sub> Large Scale Enhanced Gas Recovery in the Altmark Natural Gas Field provides site-specific knowledge for a potential future pilot project. This contributed volume gives an overview and final results of the entire project, which is finalized to the end of 2012. **Reservoir Characterization of Tight Gas Sandstones** Ali Kadkhodaie, Rahim Kadkhodaie, 2022-08-10 Reservoir Characterization of Tight Gas Sandstones Exploration and Development is essential reading for those working in oil and gas exploration both in industry and academia, as it contains chapters that help them further understand all aspects of tight gas reservoirs. In this book, experts in industry and academia update readers on new methods of tight gas reservoir modeling and evaluation. As there are very limited published books in the field of tight sandstones, this book will benefit readers by making them familiar with state-of-art methods of tight gas sandstones characterization and evaluation. Features case studies from countries with considerable tight gas sandstones such as the United States, China, Canada, and Australia. Includes recent developments in sedimentological, petrophysical, reservoir modeling, and fracking technologies of tight gas sandstone reservoirs. Covers applications for the characterization and evaluation of tight sandstones for the methodologies presented. **United Kingdom Oil and Gas Fields** G. Goffey, J.G. Gluyas, 2020-12-03 Geological Society Memoir 52 records the extraordinary 50-year journey that has led to the development of some 458 oil and gas fields on the UKCS. It contains papers on almost 150 onshore and offshore fields in all of the UK's main petroliferous basins. These papers range from look-backs on some of the first developed gas fields in the Southern North Sea to papers on fields that have only just been brought into production or may still remain undeveloped and includes two candidate CO<sub>2</sub> sequestration projects. These papers are intended to provide a consistent summary of the exploration, appraisal, development, and production history of each field, leading to the current subsurface understanding, which is described in greater detail. As such, the Memoir will be an enduring reference source for those exploring for

developing producing hydrocarbons and sequestering CO<sub>2</sub> on the UKCS in the coming decades It encapsulates the petroleum industry s deep subsurface knowledge accrued over more than 50 years of exploration and production      **Opening and Closure of the Neuquén Basin in the Southern Andes** Diego Kietzmann,Andrés Folguera,2020-01-14 This book provides an overview of newly gathered material focusing on the opening and closure of The Neuquén Basin The Neuquén Basin contains the most important hydrocarbon reservoirs in Argentina and therefore is characterized by a profound knowledge of the sedimentation mechanisms and closure times During the last 10 years a considerable amount of new information has been produced that illustrates a complex evolution that involves more than one synrift stage during its evolution an aborted sag phase associated with the inception of a first foreland basin in late Early Cretaceous times two extensional destabilizations in the Late Cretaceous Paleocene and late Oligocene times and a Neogene magmatic expansion coetaneous to a last mountain building These processes have produced a polyphasic complex structure that exhumed the rich sedimentary record that characterizes the basin
