

### IMPORTANT SAFETY INSTRUCTIONS (SAVE THESE INSTRUCTIONS)

This manual contains important safety instructions. Please read and follow all instructions carefully before and during installation and operation of unit. Read this manual thoroughly before attempting to install or operate.

**CAUTION:** To prevent the risk of fire or electric shock, install in a temperature and humidity-controlled indoor area, free of conductive contaminants.

**CAUTION:** To reduce the risk of electric shock, do not remove the cover secured by star-shaped screws. No user-serviceable parts are inside except for the battery. Refer servicing to qualified personnel.

**CAUTION:** The battery can energize hazardous live parts inside even when the AC input power is disconnected.

**CAUTION:** UPS must be connected to an AC power outlet with fuse or circuit breaker protection. Do not plug into an outlet that is not grounded. If you need to de-energize this equipment, turn off and unplug the unit.

**CAUTION:** To avoid electrical shock, turn off the unit and unplug it from the AC power source before servicing the battery or installing a computer component.

**DO NOT USE FOR MEDICAL OR LIFE SUPPORT EQUIPMENT:** Dynex does not sell products for life support or medical applications or for use in any circumstance that would affect operation or safety of any medical or life support or medical applications or patient care.

**DO NOT USE WITH OR NEAR AQUARIUMS:** To reduce the risk of fire, do not use with or near aquariums. Condensation from the aquarium can cause the unit to short out.

**CAUTION:** To reduce the risk of fire, connect only to a circuit provided with 20 amperes maximum branch circuit overcurrent protection in accordance with the National Electrical Code, ANSI/NFPA 70.

### DESCRIPTION

- Power Switch:** Can be used as the master on/off switch for computer equipment connected to the battery power supplied outlets.
- Power On Indicator:** This LED is illuminated when the utility condition is normal and the UPS outlets are providing "clean power," free of any surges or sags.
- Electrical Wiring Fault Indicator:** This LED indicator will illuminate to warn the user that a wiring problem exists, such as bad ground, missed ground, or reversed wiring. If this is illuminated, user is advised to disconnect all electrical equipment from the outlet and have an electrician check the outlet to insure proper ground.
- Battery Surge Outlets:** Provides battery-powered surge outlets for the connected equipment and insures uninterrupted operation of your equipment during a power failure.
- Surge Only Outlets:** Provides surge protection for non-critical equipment.

**6. Serial Port to PC:** The UPS communicates its status through the serial connection to the PC.

**7. Communication Protection Ports:** The communication protection ports are designed to protect standard modem, fax, telephone or network line.

**8. Circuit Breaker:** Located on the side of the unit, the circuit breaker serves to provide circuit overload and fault protection. Under normal conditions, the circuit breaker is flush with the unit.

### HOW TO DETERMINE THE POWER REQUIREMENTS OF YOUR EQUIPMENT

- Make sure that the total Volt-Amps (VA) requirements of your computer, monitor and peripheral equipment does not exceed 800VA for TE885AVR / 675VA for TE875AVR/USB.
- Make sure that the equipment plugged into the three battery-powered outlets does not exceed the UPS unit's rated capacity (800VA/600W for TE885AVR, 675VA/540W for TE875AVR/USB). If rated unit capacities are exceeded, an overload condition may occur and cause the UPS unit to shut down or the circuit breaker to trip.
- If the power requirements of your equipment are listed in units other than Volt-Amps (VA), convert Watts (W) or Amps (A) into VA by doing the calculations below. Note: The below equation only calculates the maximum amount of VA that the equipment can use, not what is typically used by the equipment at any one time. Users should expect usage requirements to be approximately 80% of below value.

4.  $\text{Watts (W)} \times 2.0 = \text{VA}$  or  $\text{Amps (A)} \times 120 = \text{VA}$

Add the totals up for all pieces of equipment and multiply this total by .8 to calculate actual requirements. There are many factors that can affect the amount of power that your computer system will require. The total load that you will be placing on the battery-powered outlets should not exceed 80% of the rated capacity.
