

The ribbon feed mechanism is motivated by the ribbon universal bar located under the keylevers. The U bar activates the connecting arm (7) which activates the ribbon pawl bracket (9) which moves the pawl bracket (1-9) and the ribbon feed pawl (1-4) which turns the ratchet wheel (1-1) and winds the ribbon. There should be .040 clearance between

the tip of pawl (1-4) and the outer edge of wheel (1-1). To adjust, form spring (1-11) so that arm (1-14) will be properly located.

The ribbon mechanism is reversed by pressure. This pressure will allow reverse arm (1-14) to be forced to the left or right as needed. Check for binds of arm (1-14) and wire (1-13).
