

Answer Key to Evolution Study Guide 2015 (separate sheets of paper will be needed)

(exact phrasing does not count, as there are multiple ways to state correct answers)

1. What are the steps of speciation? *Separation, adaptation, and division*
2. What is evolution? *Change in the characteristics of a population over time, where the change is inherited.*
3. What are vestigial structures, give an example, and how do they support evolution? *Vestigial structures are the remains or remnants of once useful structures, but are not useful to the creature that has them. Examples are the tail bone of the human, and the hind leg bones of the whale. They let you trace evolution backwards to a prior organism.*

2. Provide a real-life example (to include the name of the organism - , the environmental pressure, and the successful adaptation) that has occurred in nature for :

Organism name	Environmental pressure	Successful adaptation
<i>Bird</i>	<i>Our prey hides from us</i>	<i>Great eyesight to see them</i>
<i>(bacteria)</i>	<i>Dreaded humans keep dosing us with antibiotics</i>	<i>Develop strains that laugh at antibiotics, "back at ya, Human!"</i>
<i>cactus(a plant)</i>	<i>Drought, animals steal our water</i>	<i>Sharp spines</i>
<i>camel(a mammal)</i>	<i>Drought in desert</i>	<i>Store water in humps</i>

3. List AND describe the steps that occur in natural selection:

Overproduction Species produces more offspring than can survive.

Genetic variation Differences between individuals, all inherited, affect their ability to survive.

Struggle to survive The fittest survive, the rest die off.

Successful reproduction: The fittest reproduce, the others (having died) don't.

4. Compare and contrast natural selection with selective breeding: *Both involve modifications in species. For natural selection, it's Nature letting the fittest survive and the others die off. For selective breeding, it's humans who choose what characteristics they want to encourage in a species.*
5. Compare and contrast selective breeding with natural selection. *BOTH involve the change of the characteristics of a population of organisms. For selective breeding, humans try to control the process. For natural selection, impersonal Nature uses survival of the fittest to weed out the unfit.*

5. List four kinds of evidence in support of evolution, and describe the support:

Kind of evidence	Description of support
<i>Fossil Record</i>	<i>Provides physical evidence of the historical record of the changes in species and of evolution.</i>
<i>Vestigial structures</i>	<i>Presence of once useful structures that have no current use to the species demonstrates that they evolved from creatures that had those structures and they were useful then.</i>
<i>Embryonic comparisons</i>	<i>Close similarities among the early embryos are evidence that</i>

Evolution Study Guide Answer Sheet
