Evolutionary Multi-objective Optimization in Uncertain Environments Chi-Keong Goh, Kay Chen Tan, 2009-02-03

Evolutionary algorithms are sophisticated search methods that have been found to be very efficient and effective in solving complex real world multi objective problems where conventional optimization tools fail to work well. Despite the tremendous amount of work done in the development of these algorithms in the past decade, many researchers assume that the optimization problems are deterministic and uncertainties are rarely examined. The primary motivation of this book is to provide a comprehensive introduction on the design and application of evolutionary algorithms for multi objective optimization in the presence of uncertainties. In this book, we hope to expose the readers to a range of optimization issues and concepts and to encourage a greater degree of appreciation of evolutionary computation techniques and the exploration of new ideas that can better handle uncertainties. Evolutionary Multi Objective Optimization in Uncertain Environments: Issues and Algorithms is intended for a wide readership and will be a valuable reference for engineers, researchers, senior undergraduates and graduate students who are interested in the areas of evolutionary multi objective optimization and uncertainties.

Recent Advances in Evolutionary Multi-objective Optimization Slim Bechikh, Rituparna Datta, Abhishek Gupta, 2016-08-09. This book covers the most recent advances in the field of evolutionary multiobjective optimization. With the aim of drawing the attention of up and coming scientists towards exciting prospects at the forefront of computational intelligence, the authors have made an effort to ensure that the ideas conveyed herein are accessible to the widest audience. The book begins with a summary of the basic concepts in multi objective optimization. This is followed by brief discussions on various algorithms that have been proposed over the years for solving such problems, ranging from classical mathematical approaches to sophisticated evolutionary ones that are capable of seamlessly tackling practical challenges such as non convexity, multi modality, the presence of multiple constraints, etc. Thereafter, some of the key emerging aspects that are likely to shape future research directions in the field are presented. These include optimization in dynamic environments, multi objective bilevel programming, handling high dimensionality under many objectives, and evolutionary multitasking. In addition to theory and methodology, this book describes several real world applications from various domains which will expose the readers to the versatility of evolutionary multi objective optimization.

Decomposition-based Evolutionary Optimization In Complex Environments

Juan Li, Bin Xin, Jie Chen, 2020-06-24. Multi objective optimization problems (MOPs) and uncertain optimization problems (UOPs) which widely exist in real life are challengeable problems in the fields of decision making, system designing and scheduling, amongst others. Decomposition exploits the ideas of making things simple and divide and conquer to transform a complex problem into a series of simple ones with the aim of reducing the computational complexity. In order to tackle the abovementioned two types of complicated optimization problems, this book introduces the decomposition strategy and

conducts a systematic study to perfect the usage of decomposition in the field of multi objective optimization and extend the usage of decomposition in the field of uncertain optimization
