

Evidence of Evolution

Background

When Charles Darwin first proposed the idea that all new species descend from an ancestor, he performed an exhaustive amount of research to provide as much evidence as possible. Today, the major pieces of evidence for this theory can be broken down into the fossil record, embryology, comparative anatomy, and molecular biology.

Fossils

This is a series of skulls and front leg fossils of organisms believed to be ancestors of the modern-day horse.

Evolution, Chance, and God Brendan Sweetman, 2015-10-22 Evolution Chance and God looks at the relationship between religion and evolution from a philosophical perspective This relationship is fascinating complex and often very controversial involving myriad issues that are difficult to keep separate from each other Evolution Chance and God introduces the reader to the main themes of this debate and to the theory of evolution while arguing for a particular viewpoint namely that evolution and religion are compatible and that contrary to the views of some influential thinkers there is no chance operating in the theory of evolution a conclusion that has great significance for teleology One of the main aims of this book is not simply to critique one influential contemporary view that evolution and religion are incompatible but to explore specific ways of how we might understand their compatibility as well as the implications of evolution for religious belief This involves an exploration of how and why God might have created by means of evolution and what the consequences in particular are for the status of human beings in creation and for issues such as free will the objectivity of morality and the problem of evil By probing how the theory of evolution and religion could be reconciled Sweetman says that we can address more deeply key foundational questions concerning chance design suffering and morality and God's way of acting in and through creation
