*Automated Design of Machine Learning and Search Algorithms* Nelishia Pillay, Rong Qu, 2021-07-28. This book presents recent advances in automated machine learning (AutoML) and automated algorithm design and indicates the future directions in this fast-developing area. Methods have been developed to automate the design of neural networks, heuristics, and metaheuristics using techniques such as metaheuristics, statistical techniques, machine learning, and hyperheuristics. The book first defines the field of automated design, distinguishing it from the similar but different topics of automated algorithm configuration and automated algorithm selection. The chapters report on the current state of the art by experts in the field and include reviews of AutoML and automated design of search, theoretical analyses of automated algorithm design, automated design of control software for robot swarms, and overfitting as a benchmark and design tool. Also covered are automated generation of constructive and perturbative low-level heuristics, selection hyperheuristics for automated design, automated design of deep learning approaches using hyperheuristics, genetic programming, hyperheuristics with transfer knowledge, and automated design of classification algorithms. The book concludes by examining future research directions of this rapidly evolving field.

Concha, Christian González-Billault, Jorge Mpodozis, 2018-09-14 The nervous system is the product of biological evolution and is shaped by the interplay between extrinsic factors determining the ecology of animals and by intrinsic processes that dictate the developmental rules that give rise to adult functional structures This special topic is oriented to develop an integrative view from behavior and ecology to neurodevelopmental processes We address questions such as how do sensory systems evolve according to ecological conditions How do neural networks organize to generate adaptive behavior How does cognition and brain connectivity evolve What are the developmental mechanisms that give rise to functional adaptation Accordingly the book is divided in three sections i Evolution of sensorimotor systems ii Cognitive computations and neural circuits and iii Development and brain evolution We hope that this initiative will support an interdisciplinary program that addresses the nervous system as a unified organ subject to both functional and developmental constraints where the final outcome results of a compromise between different parameters rather than being the result of several single variables acting independently of each other
