Darwin's Roadmap to the Curriculum Glenn Geher, David Sloan Wilson, Hadassah Head, Andrew Gallup, 2019-05-01 There is a paradox when it comes to Darwinian ideas within the academy On one hand Darwin's theories have famously changed the foundational ideas related to the origins of life shaping entire disciplines in the biological sciences On the other hand people in educated societies across the globe today are famously misinformed and uneducated about Darwinian principles and ideas Applications of evolutionary theory outside the traditional areas of biology have been slow to progress and scholars doing such work regularly run into all kinds of political backlash However a slow but steady push to advance the teaching of evolution across academic disciplines has been under way for more than a decade This book serves to integrate the vast literature in the interdisciplinary field of Evolutionary Studies EvoS providing clear examples of

how evolutionary concepts relate to all facets of life Further this book provides chapters dedicated to the processes associated with an EvoS education including examples of how an interdisciplinary approach to evolutionary theory has been implemented successfully at various colleges universities and degree programs This book also offers chapters outlining a variety of applications to an evolution education including improved sustainable development medical practices and creative and critical thinking skills Exploring controversies surrounding evolution education this volume provides a roadmap to asking and answering Darwinian questions across all areas of intellectual inquiry
