Evolutionary Games in Natural, Social, and Virtual Worlds Daniel Friedman, Barry Sinervo, 2016-02-01 Over the last 25 years evolutionary game theory has grown with theoretical contributions from the disciplines of mathematics economics computer science and biology It is now ripe for applications In this book Daniel Friedman an economist trained in mathematics and Barry Sinervo a biologist trained in mathematics offer the first unified account of evolutionary game theory aimed at applied researchers They show how to use a single set of tools to build useful models for three different worlds the natural world studied by biologists the social world studied by anthropologists economists political scientists and others and the virtual world built by computer scientists and engineers The first six chapters offer an accessible introduction to core concepts of evolutionary game theory These include fitness replicator dynamics sexual dynamics memes and genes single and multiple population games Nash equilibrium and evolutionarily stable states noisy best response and other adaptive processes the Price equation and cellular automata The material connects evolutionary game theory with classic population genetic models and also with classical game theory Notably these chapters also show how to estimate payoff and choice parameters from the data The last eight chapters present exemplary game theory applications These include a new coevolutionary predator prey learning model extending rock paper scissors models that use human subject laboratory data to estimate learning dynamics new approaches to plastic strategies and life cycle strategies including estimates for male elephant seals a comparison of machine learning techniques for preserving diversity to those seen in the natural world analyses of congestion in traffic networks either internet or highways and the price of anarchy environmental and trade policy analysis based on evolutionary games the evolution of cooperation and speciation As an aid for instruction a web site provides downloadable computational tools written in the R programming language Matlab Mathematica and Excel

Game Theory Explained: A Mathematical Introduction With Optimization Christopher H Griffin, 2025-02-27 This book provides an introduction to the mathematical theory of games using both classical methods and optimization theory Employing a theorem proof example approach the book emphasizes not only results in game theory but also how to prove them Part 1 of the book focuses on classical results in games beginning

with an introduction to probability theory by studying casino games and ending with Nash's proof of the existence of mixed strategy equilibria in general sum games. On the way utility theory, game trees and the minimax theorem are covered with several examples. Part 2 introduces optimization theory and the Karush-Kuhn-Tucker conditions and illustrates how games can be rephrased as optimization problems, thus allowing Nash equilibria to be computed. Part 3 focuses on cooperative games. In this unique presentation, Nash bargaining is recast as a multi-criteria optimization problem and the results from linear programming and duality are revived to prove the classic Bondareva-Shapley theorem. Two appendices covering prerequisite materials are provided and a bonus appendix with an introduction to evolutionary games allows an instructor to swap out some classical material for a modern self-contained discussion of the replicator dynamics, the author's particular area of study.

Routledge Handbook of Behavioral Economics Roger Frantz, Shu-Heng Chen, Kurt Dopfer, Floris Heukelom, Shabnam Mousavi, 2016-08-05 There is no doubt that behavioral economics is becoming a dominant lens through which we think about economics. Behavioral economics is not a single school of thought but representative of a range of approaches and uniquely this volume presents an overview of them. The wide spectrum of international contributors each provides an exploration of a central approach, aspect or topic in behavioral economics. Taken together, the whole volume provides a comprehensive overview of the subject which considers both key developments and future possibilities. Part One presents several different approaches to behavioural economics including George Katona, Ken Boulding, Harvey Leibenstein, Vernon Smith, Herbert Simon, Gerd Gigerenzer, Daniel Kahneman and Richard Thaler. This section looks at the origins and development of behavioral economics and compares and contrasts the work of these scholars who have been so influential in making this area so prominent. Part Two presents applications of behavioural economics including nudging, heuristics, emotions and morality, behavioural political economy, education and economic innovation. The Routledge Handbook of Behavioral Economics is ideal for advanced economics students and faculty who are looking for a complete state-of-the-art overview of this dynamic field.

Cognition of the Law Luigi Cominelli, 2018-07-04 This book's basic hypothesis, which it proposes to test with a cognitive sociological approach, is that legal behavior like every form of human behavior is directed and framed by biosocial constraints that are neither entirely genetic nor exclusively cultural. As such, from a sociological perspective, the law can be seen as a super-meme that is as a biosocial constraint that develops only in complex societies. This super-meme theory, by highlighting a fundamental distinction between defensive and assertive biases, might explain the false contradiction between law as a static and historical phenomenon and law as a dynamic and promotional element. Socio-legal scholars today have to face the challenge of pursuing a truly interdisciplinary approach connecting all the fields that can contribute to building a modern theory of normative behavior and social action. Understanding and framing concepts such as rationality, emotion or justice can help to overcome the significant divide between micro and macro sociological knowledge. Social scientists who are interested in the law must be able to master the epistemological discourses of different disciplines.

and to produce fruitful syntheses and bridge operations so as to understand the legal phenomenon from each different point of view The book adopts four perspectives sociological psychological biological evolutionary and cognitive All of them have the potential to be mutually integrated and constitute that general social science that provides common ground for exchange The goal is to arrive at a broad and integrated view of the socio legal phenomenon paving the way for a comprehensive theory of norm oriented and norm perceived actions The Human Scaffold Josh Berson,2021-03-23 Humanity has precipitated a planetary crisis of resource consumption a crisis of stuff So ingrained is our stuff centric view that we can barely imagine a way out beyond substituting a new portmanteau of material things for the one we have today In The Human Scaffold anthropologist Josh Berson offers a new theory of adaptation to environmental change Drawing on niche construction evolutionary game theory and the enactive view of cognition Berson considers cases in the archaeology of adaptation in which technology in the conventional sense was virtually absent Far from representing anomalies these cases exemplify an enduring feature of human behavior that has implications for our own fate The time has come to ask what the environmental crisis demands of us not as consumers but as biological beings The Human Scaffold offers a starting point

The New Boundaries Between Bodies and Technologies Bianca Maria Pirani,Ivan Varga,2008 The new boundaries between bodies and technologies constitute one of the most important developments in the last fifty years Through technologies we not only change the relations between a natural given the body and a human made artefact the technology but also change the ways we experience the world How close are we to a world in which the abilities of machines are indistinguishable from those of the species that invented them Our encounters with the new technologies change the cognitive processes and influences the modes of processing information Moreover it raises the question of the nature of human beings Traversing body as emotive being in the world and body as location culturally and socially constructed there is a third dimension the dimension of technological Are we able to use these new dimension as a creative interface between the emotional brain the acting body and ICTS In answering these questions the book explores the action of bodies in technology that is how the sense of our bodies and of our orientation in the world are affected by information and communication technologies It contributes therefore to the world wide discussion and debates on the impact of technology especially information technology on the lives of human beings in the age of globalization in particular to the present thinking of the relationship between technology and embodiment **CVE 2000** Elizabeth F.
