**Noncognitive psychological processes and academic achievement** Jihyun Lee,Lazar Stankov,2017-10-02 It is becoming increasingly clear that non cognitive psychological processes are important for students school achievement even to the point where their influence may

be stronger than that exerted by the parents teachers or the school atmosphere itself Non cognitive psychological variables refer to varieties of self beliefs and goal orientations such as anxiety confidence self efficacy and self concept which are often seen as dispositional and motivational in nature It is particularly important to highlight the role that confidence and self efficacy play in school achievement as these two self beliefs are related to metacognitive processing the awareness of what you know and what you do not know Self concept meanwhile tends to exert its influence on an individual s choice of tertiary level courses This book suggests that by focusing on students self beliefs the education system may be in a position to improve cognitive performance since individual students self beliefs may be more malleable than the cognitive processes involved in acquiring academic knowledge Focusing on these non cognitive psychological processes is also likely to be more effective in improving performance than system wide interventions involving changes in policy for both public and private sector educators This book will be useful to educational researchers school leaders administrators counsellors and teachers in guiding students attitudes towards learning and school performance It will also provide students in psychology and education with broad and nuanced insights into the drivers of school achievement This book was originally published as a special issue of Educational Psychology

#### **Reforms and Issues in School Mathematics in East Asia** ,2010-01-01

Worldwide efforts to improve students learning of mathematics have turned educational researchers attention to some high achieving education systems especially those in East Asia including Chinese Mainland Hong Kong Japan Singapore South Korea and Taiwan However there is much less sharing and learning of educational policy and practices that goes beyond one or two such high achieving education systems At this time when educational changes and reforms for improving students learning of mathematics are also underway within these high achieving education systems in East Asia it becomes timely and important for the world to learn why and how relevant changes take place across these selected education systems This book has put together a set of papers that individually presents issues on the changing mathematics curriculum and teacher education in the six high achieving education systems in East Asia Collectively the book extends beyond what we can learn about exemplary practices in individual education systems in East Asia It helps us develop a better understanding of the interplay between various measures for the pursuit of excellence in mathematics curriculum and teacher education on the one hand and the different system contexts on the other The intended readers of the book include education policy makers curriculum developers researchers teachers teacher educators and anyone else interested in school mathematics curriculum and teacher education
