

The method:

Applicable to optimization problems ONLY

Constructs a solution through a sequence of steps

Each step expands a partially constructed solution so far, until a complete solution to the problem is reached.

On each step, the choice made must be

Feasible: it has to satisfy the problem's constraints(without regard for future consequences)

Locally optimal: it has to be the best local choice among all feasible choices available on that step

Irrevocable: Once made, it cannot be changed on subsequent steps of the algorithm
