

For example, if you cross-pollinate homozygous red and homozygous white carnation flower plants, the dominant allele that produces the red color is not completely dominant over the recessive allele that produces the white color. The resulting offspring are pink.

Cross true-breeding parents in P generation (RR red and WW white)

F1 = hybrid offspring (RW pink) because in these flowers the red allele only contributes $\frac{1}{2}$ the amount of red pigment needed for a red flower. So to have a red flower, 2 Red alleles are required.

F2 = take two F1 organisms (RW x RW) and cross = $\frac{1}{4}$ RR red, $\frac{1}{4}$ WW white, and $\frac{1}{2}$ RW pink offspring.

13. How many alleles determine human blood type? How many different blood type phenotypes are possible?

3 alleles: A, B and O

4 phenotypes B, A, AB, O

6 genotypes BB, BO, AA, AO AB, OO

14. Can a person with type A blood receive blood from a person with type B blood? WHY/WHY NOT?

No, B type blood has B carbohydrates molecules on its surface. A person with type A blood will not recognize these B carbohydrates and their immune system will think they are foreign invaders = blood clumps

15. A woman with type O blood has a child with type B blood. If the "father" has Type O blood, could he be this child's father? NO! If the mother has type O blood, her genotype must be OO and she can only give her child an O allele. The same is true for a father with type O blood, he can only give the child an O allele. The child would have to have O type blood for this
