Lesson Objectives

-  State Charles Darwin's contribution to science.
-  Describe the three patterns of biodiversity noted by Darwin.

Lesson Summary

Darwin's Epic Journey Darwin developed a scientific theory to explain how **evolution**, or change over time, occurs in living things. Darwin's theory explains how modern organisms have evolved over long periods of time through descent from common ancestors.

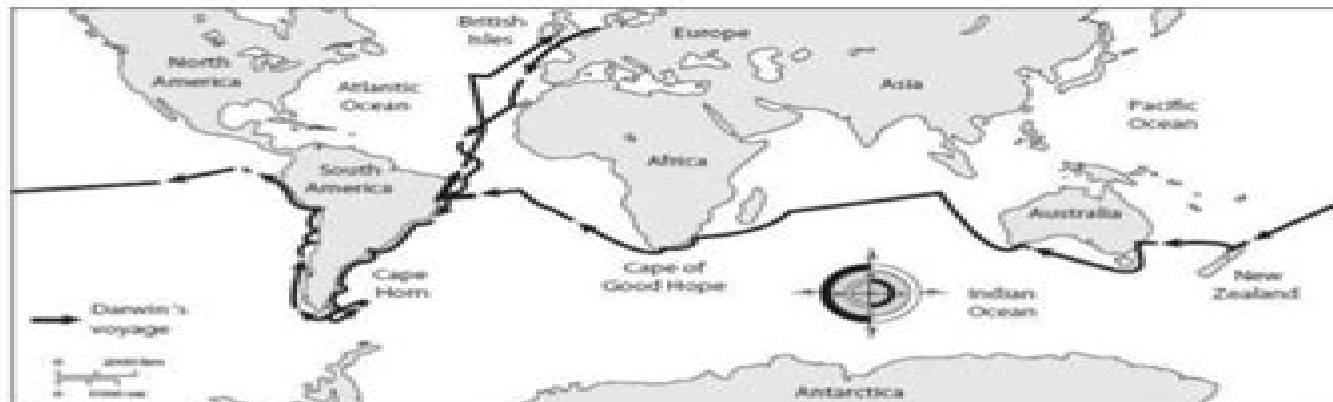

Observations Aboard the *Beagle* During his five-year trip on the *Beagle*, Darwin made many observations and collected a great deal of evidence.

- ▶ He noticed that many different, yet ecologically similar, animal and plant species occupied different, yet ecologically similar, habitats around the globe.
- ▶ On the Galápagos Islands, Darwin noticed that the traits of many organisms—such as the shell shapes of tortoises—varied from island to island. He noticed that different, yet related, animal and plant species occupied different habitats within a local area.
- ▶ Darwin collected **fossils**, the preserved remains of ancient organisms. He noticed that some fossils of extinct species resembled living species.

Darwin's findings led him to think that species are not fixed and that they could change by some natural process.

Darwin's Epic Journey

1. **THINK VISUALLY** (1) find and label the Galápagos Islands (2) circle the names of three large land masses Darwin did not visit on his voyage.

2. Darwin spent most of his time exploring the continent of South America____; he did not visit Asia____, North America____, or Asia_____.
3. During Darwin's time, geologists were suggesting that Earth was Flat_____.
4. Darwin's work offers insight into the living world by showing organisms are constantly Changing_____.
