

Chapter 4: Process Costing

Overview

- Not all products are unique and identifiable, thus, we cannot use job-costing
- We use process costing for homogenous and continuous units
 - For example, paper towels
- Process costing spreads costs uniformly over the entire output

Job Order vs Process Costing

- Similarities
 - Allocating product costs to units produced
 - Assigning direct material, direct labor, and MOH costs
 - Same cost flows: RM → WIP → FG
- Differences

JOB COSTING	PROCESS COSTING
Jobs are unique and identifiable units	Single, continuously manufactured product
Costs allocated to each job	Costs allocated to each department
Costs computed by job	Costs computed by department

Cost Flows Process Costing

- Processing Department: where work is performed
 - Processing department has a specific process
 - Usually, multiple processing departments
 - Each department may add DM, DL, and MOH
 - One departments completed units might be another departments DM
 - Each department has its own WIP account
- Two key features of the departments
 - Activity is done uniformly on all units
 - Output is homogenous (all units identical)

Potato Chip Example

- Department 1: Potato preparation
 - DM is raw potatoes
 - Also, have DL and MOH
 - Output is prepped potatoes
- Department 2: Potato cooking
 - DM is output of department 1, salt, and oil
 - Also, have DL and MOH
 - Output is cooked potatoes, ready to package
- Department 3: Inspection and packaging
