Emergent Materialism Emergent Materialism:

Emergent Materialism Selton Luke Peters, 1995 An introduction to some of the major objections against traditional materialism Topics include the identity of mental and physical events the question of the existence of irreducibly psychic properties the function of consciousness and the problem of personal identity The Mind and the Brain Jeffrey M. Schwartz, Sharon Begley, 2009-07-23 A leading researcher in brain dysfunction and a Wall Street Journal science writer demonstrate that the human mind is an independent entity that can shape and control the physical brain Materialism: Its Ontology and Epistemology Gustavo E. Romero, Javier Pérez-Jara, Lino Camprubí, 2022-06-01 This book provides an up to date revision of materialism's central tenets its main varieties and the place of materialistic philosophy vis a vis scientific knowledge Materialism has been the subject of extensive and rich controversies since Robert Boyle introduced the term for the first time in the 17th century But what is materialism and what can it offer today The term is usually defined as the worldview according to which everything real is material Nevertheless there is no philosophical consensus about whether the meaning of matter can be enlarged beyond the physical As a consequence materialism is often defined in stark exclusive and reductionist terms whatever exists is either physical or ontologically reducible to it This conception if consistent mutilates reality excluding the ontological significance of political economic sociocultural anthropological and psychological realities Starting from a new history of materialism the present book focuses on the central ontological and epistemological debates aroused by today s leading materialist approaches including some little known to an anglophone readership The key concepts of matter system emergence space and time life mind and software are checked over and updated Controversial issues such as the nature of mathematics and the place of reductionism are also discussed from different materialist approaches As a result materialism emerges as a powerful indispensable scientifically supported worldview with a surprising wealth of nuances and possibilities Psychological Review James Mark Baldwin, James McKeen Cattell, Howard Crosby Warren, John Broadus Watson, Herbert Sidney Langfeld, Carroll Cornelius Pratt, Theodore Mead Newcomb, 1929 Issues for 1894 1903 include the section Psychological literature Studies on Mario Bunge's **Treatise** ,2025-02-10 The Blackwell Guide to Philosophy of Mind Stephen P. Stich, Ted A. Warfield, 2008-04-15 Comprising a series of specially commissioned chapters by leading scholars this comprehensive volume presents an up to date survey of the central themes in the philosophy of mind It leads the reader through a broad range of topics including Artificial Intelligence Consciousness Dualism Emotions Folk Psychology Free Will Individualism Personal Identity and The Mind Body Problem Provides a state of the art overview of philosophy of mind Contains 16 newly commissioned articles all of which are written by internationally distinguished scholars Each chapter reviews a central issue examines the current state of the discipline with respect to the topic and discusses possible futures of the field Provides a solid foundation for further study Physicalism and Mental Causation Sven Walter, Heinz-Dieter Heckmann, 2015-11-04 Physicalism the thesis that

everything there is in the world including our minds is constituted by basic physical entities has dominated the philosophy of mind during the last few decades But although the conceptual foundations of the physicalist agenda including a proper explication of notions such as causation determination realization or even physicalism itself must be settled before more specific problems e g the problems of mental causation and human agency can be satisfactorily addressed a comprehensive philosophical reflection on the relationships between the various key concepts of the debate on physicalism is yet missing This book presents a range of essays on the conceptual foundations of physicalism mental causation and human agency written by established and leading authors in the field The Philosophical Quarterly, 1929 Personal Reality, Volume 1 Daniel Paksi, 2019-05-02 Western civilization was built on the concept of God Today modern science based on the critical method and so called objective facts denies even the existence of our soul There is only matter atoms molecules and DNA sequences There is no freedom there are no well grounded beliefs The decline of Western civilization is not the simple consequence of decadence hedonism and malevolence Modern critical science has liberated us from the old dogmas but failed to establish our freedoms values and beliefs However human knowledge is not objective but personal We are the children of evolution Everybody sees the world from his own personal point of view anchored into his her body We use our billions of years old evolutionary skills and thousands of years old cultural heritage to recognize and acknowledge the personal facts of our reality freedom and most important natural beliefs respect and speak the truth In reality even science itself is based on our personal knowledge Only our false conceptual dichotomies paralyze our thinking God or matter there is a third choice the emergence of life and human persons This is the only way to defend our freedoms and the Christian moral dynamism of free Western societies The Creation of Self Joshua R. Farris, 2023-06-30 Situated in broader science and religion discussions The Creation of Self is the first book length defense of a creationist view of persons as souls This book therefore serves as both a novel argument for God's creation of selves and as a critique of contemporary materialist and emergent self alternatives critically examining naturalistic views that argue for a regular law like process behind the emergence of personhood Author Joshua Farris argues on the assumption that persons are fundamentally unique individuals that look more like singularities of nature rather than material products grounded in regularity or predictability from past events By extending the basic intuition that we are unique and mysterious individuals Farris develops a sophisticated analytic defense of the soul that requires a sufficient explanation not found in nature but made by a Creator who has intentions and the power to bring about novel entities in the world The Creation of Self gives philosophers theologians and the lay intellectual grounding for thinking about persons as religious beings It aims to help readers understand why recent scientifically motivated objections to the soul are unsuccessful and why we must consider a religious conception of persons as souls as a common starting point The Mind and its Place in Nature C.D. Broad, 2014-06-03 This is Volume III of eight in a collection on the Philosophy of the Mind and Language Originally published in 1925 this text looks at alternative

theories of life and mind at the level of enlightened common sense the Mind's knowledge of Existents and the Unconscious Consciousness Antti Revonsuo, 2009-12-16 The study of consciousness is recognized as one of the biggest remaining challenges to the scientific community This book provides a fascinating introduction to the new science that promises to illuminate our understanding of the subject Consciousness covers all the main approaches to the modern scientific study of consciousness and also gives the necessary historical philosophical and conceptual background to the field Current scientific evidence and theory from the fields of neuropsychology cognitive neuroscience brain imaging and the study of altered states of consciousness such as dreaming hypnosis meditation and out of body experiences is presented Revonsuo provides an integrative review of the major existing philosophical and empirical theories of consciousness and identifies the most promising areas for future developments in the field This textbook offers a readable and timely introduction to the science of consciousness for anyone interested in this compelling area especially undergraduates studying psychology philosophy cognition neuroscience and related fields In Search of the Soul Joel B. Green, Stuart L. Palmer, Kevin Corcoran, 2005-01-01 Editors Joel B Green and Stuart L Palmer present differing evangelical perspectives on the body and soul mind and brain problem Stewart Goetz on substance dualism William Hasker on emergent dualism Nancey Murphy on nonreductive physicalism and Kevin Corcoran on the constitution view of persons Consciousness and the Ontology of Properties Mihretu P. Guta, 2018-07-20 This book aims to show the centrality of a proper ontology of properties in thinking about consciousness Philosophers have long grappled with what is now known as the hard problem of consciousness i e how can subjective or qualitative features of our experience such as how a strawberry tastes arise from brain states More recently philosophers have incorporated what seems like promising empirical research from neuroscience and cognitive psychology in an attempt to bridge the gap between measurable mental states on the one hand and phenomenal qualities on the other In Consciousness and the Ontology of Properties many of the leading philosophers working on this issue as well as a few emerging scholars have written 14 new essays on this problem The essays address topics as diverse as substance dualism mental causation the metaphysics of artificial intelligence the logic of conceivability constitution extended minds the emergence of consciousness and neuroscience and the unity and neural correlates of consciousness but are nonetheless unified in a collective objective the need for a proper ontology of properties to understand the hard problem of consciousness both on non empirical and empirical grounds *Understanding Hard to Maintain Behaviour Change* Ron Borland, 2014-02-03 The book presents an integrative theory of hard to maintain behaviours that includes hard to reduce or eliminate behaviours like smoking and other drug use overconsumption of food or unsafe sex and hard to sustain behaviours like exercise and sun safe behaviours Most of the examples come from the author's work on tobacco smoking but it is relevant to anyone who is concerned to understand why some forms of desirable behaviour are so hard to achieve and to those trying to help people change It also has important implications for public health campaigns and for the development of

policies to nudge behaviour in desirable ways The book provides readers with frameworks to Determine whether a hard to maintain behaviour is a result of the skills needed to perform it its reinforcement history the way the person thinks about it the context or some combination of these Better integrate cognitive and behavioural change strategies including emergent strategies related to mindfulness and acceptance plus novel ways of retraining operational processes Understand the different nature of challenges for behaviours where multiple attempts are typically required before the desired behaviour pattern is sustained Better understand the role of feelings and emotions as influences on behaviour Understand the limits of environmental factors to determine change Understand the limits of self control and will power In Search of the Soul. Second Edition Joel B. Green, 2010-11-01 Why A Search for the Soul Many Christians assume that it is biblically faithful and theologically noncontroversial to speak of humans having a soul Yet a wide range of biblical scholars are questioning whether we have correctly understood what the Bible means when it speaks of the soul And contemporary neuroscience is laying more and more questions at the doorstep of the church asking whether our human sense of self is intelligible on the basis of soul But for thoughtful Christians following science on this point looks like caving in to reductionism while denying science gives off the door of obscurantism In Search of the Soul provides a rare opportunity to listen in as four Christian philosophers set forth their best arguments for their distinct views and then respond to each other While each of these views calls for careful framing and patient exposition they are labeled as follows SUBSTANCE DUALISM Stewart Goetz EMERGENT DUALISM William Hasker NONREDUCTIVE PHYSICALISM Nancey Murphy CONSTITUTION VIEW OF PERSONS Kevin Corcoran The editor introduces the debate by laying out the critical issues at stake and wraps it up by considering the implications for the Christian life particularly hospitality and forgiveness This is a book of timely interest to philosophers theologians psychologists and pastors Whatever conclusions readers may draw they will find here an instructive and **Signals in the Noise:** engaging discussion of a controversy that will not go away any time soon Consciousness. **Encountering the Limits of Materialist Science - An Exploration of Consciousness and Reality Robert** DeFilippis, 2023-10-15 Signals in the Noise An Exploration of Consciousness and Reality How Current Research is Challenging Materialist Science The Signals in the Noise groundbreaking theories about consciousness are meticulously explored presenting an avant garde perspective that stands to challenge our traditional materialist viewpoints The author leads us on an intellectual journey questioning established materialist scientific norms and bringing forward evidence that defies materialist theories of consciousness The book emphasizes that consciousness persists and can even be enhanced when brain activity decreases supported by numerous research studies involving psychedelics near death experiences and other instances when brain functions are diminished This new understanding suggests that consciousness transcends the physical confines of our biological makeup challenging conventional notions about its origin and nature Furthermore the book introduces a transformative perspective on the universe proposing that what we perceive as material is merely a

function of our sensory systems Based on the author's review of current theories of the composition of the cosmos we now know everything that exists is composed of energy with physicality representing deeper qualities that lie out of our reach Drawing on proven quantum physics the author presents the theory that the universe's interconnectedness is a product of coherent quantum fields from which everything emerges and takes on the character of separateness and materiality in the 4D or manifest level we experience In a radical departure from mainstream materialist thought The Signals in the Noise argues that consciousness is a universal phenomenon occurring in varying degrees of complexity across all organisms The author posits that while the presence of proto consciousness is universal the consciousness we experience emerges in the fourth dimensional or manifest level an idea that if widely accepted can redefine our understanding of life and existence Finally the author criticizes the materialist worldview stating that this ingrained belief system creates many societal political religious and environmental problems He argues that our obstinate adherence to materialist orthodoxy drives our trajectory toward planetary destruction Catalyzed by our capitalist system of consumption this materialist belief system hinders our ability to recognize and correct the adverse effects of our actions The Signals in the Noise is a compelling critique of the materialist worldview challenging our understanding of consciousness existence and our place in the universe It underscores the urgency to redefine our perspectives to avert the catastrophic trajectory that our current beliefs are driving us toward This book is a radical and thought provoking read for anyone interested in consciousness quantum physics and the future of Personal Identity Georg Gasser, Matthias Stefan, 2012-11-15 We take it for granted that a person persists over our planet time when we make plans we assume that we will carry them out when we punish someone for a crime we assume that she is the same person as the one who committed it Metaphysical questions underlying these assumptions point towards an area of deep existential and philosophical interest In this volume leading metaphysicians discuss key questions about personal identity including What are we How do we persist and Which conditions guarantee our identity over time They discuss whether personal identity is complex whereby it is analyzable in terms of simpler relations such as physical or psychological features or whether it is simple namely something that cannot be analyzed in terms of more fundamental relations Their essays offer an innovative discussion of this topic and will be of interest to a wide readership in metaphysics Rethinking **Human Nature** Kevin J. Corcoran, 2006-06-01 What are we as human persons Are we immaterial souls capable of disembodied existence or merely animals destined to dust For centuries scholars have debated this issue and that debate continues today But the question of human nature can no longer remain a topic for discussion within the hallowed halls of the academy End of life ethical decisions human cloning fetal tissue transplants and stem cell research all reveal the urgency and the importance of the question for ordinary people Rethinking Human Nature offers a fascinating look at what it means to be human by defending the constitutional view which suggests we are constituted by our bodies without being identical to the bodies that constitute us Grounded in Scripture this book connects the theology and philosophy of human nature with the

moral conundrums that confront us at the margins of life
