Synthetic Biology 2020: Frontiers in Risk Analysis and Governance Benjamin D. Trump, Christopher L. Cummings, Jennifer Kuzma, Igor Linkov, 2019-11-28 Synthetic biology offers powerful remedies for some of the world's most intractable problems but these solutions are clouded by uncertainty and risk that few strategies are available to address The incentives for continued development of this emerging technology are prodigious and obvious and the public deserves assurances that all potential downsides are duly considered and minimized accordingly Incorporating social science analysis within the innovation process may impose constraints but its simultaneous support in making the end products more acceptable to society at large should be considered a worthy trade off Contributing authors in this volume represent diverse perspectives related to synthetic biology's social sciences and reflect on different areas of risk analysis and governance that have developed for the field Such perspectives include leading scholarly discussion pertaining to risk assessment governance ethics and communication The chapters of this volume note that while the first twenty years of synthetic biology development have focused strongly on technological innovation and product development the next twenty should emphasize the synergy between developers policymakers and publics to generate the most beneficial well governed and transparent technologies and products possible Many chapters in this volume provide new data and approaches that demonstrate the feasibility for multi stakeholder efforts involving policymakers regulators industrial developers workers experts and societal representatives to share responsibilities in the production of effective and acceptable governance in the face of uncertain risk probabilities A full consideration of such perspectives may prevent a world of draconian regulations based on an insufficient

or incomplete understanding of the science that underpins synthetic biology as well as any hesitancy or fear by the public to adopt its eventual products **Sustainable Trade, Investment and Finance** Clair Gammage, Tonia Novitz, 2019

Morris, 2012-02-09 Risk Language and Power explores discourse around the environmental risks of nanotechnology making the case that the dominance in risk discourse of regulatory science is a limiting policy debate on environmental risks and that specific initiatives should be undertaken to broaden debate not just on nanotechnology but generally on the risks of new technologies Morris argues that the treatment of environmental risk in public policy debates has failed for industrial chemicals is failing for nanotechnology and most certainly will fail for synthetic biology and other new technologies unless we change how we describe the impacts to people and other living things from the development and deployment of technology However Morris also contends that the nanotechnology case provides reason for optimism that risk can be given different and better treatment in environmental policy debates Risk Language and Power proposes specific policy initiatives to advance a richer discourse around the environmental implications of emerging technologies Morris believes that evidence of enriched environmental policy debates would be a decentering of language concerning risk by developing within discourse language and practice directed toward enriching the human and environmental condition **Ask, Measure, Learn** Lutz Finger, Soumitra Dutta, 2014-01-23 You can measure practically anything in the age of social media but if you don't know what you're looking for collecting mountains of data won't yield a grain of insight This non technical guide shows you how to extract significant business value from big data with Ask Measure Learn a system that helps you ask the right questions measure the right data and then learn from the results Authors Lutz Finger and Soumitra Dutta originally devised this system to help governments and NGOs sift through volumes of data With this book these two experts provide business managers and analysts with a high level overview of the Ask Measure Learn system and demonstrate specific ways to apply social media analytics to marketing sales public relations and customer management using examples and case studies **Countdown to Kyoto, Parts I-III** United States.
