hundred years That's how dangerous an EMP weapon truly is As a society we are highly dependent on our power grid and our electronics An EMP attack would take out all of that The skies all over a large portion of the earth would turn green red and purple All of our satellites in orbit around the Earth could be taken out The power grid would be taken out Cars would crash on the road and planes would fall out of the sky Your electronic devices would no longer work The world will go dark And to make things worse this is how life is going to be for you for the next ten or more years Even the most conservative projections are that just 10-20% of Americans would survive an EMP attack as most would die from starvation dehydration murder disease or suicide in the months after it happened But I have good news for you even if an EMP attack were to happen in the near future all hope is not lost Even though the average American citizen is not prepared whatsoever for an EMP attack that doesn't mean that you have to be This book is going to cover 31 survival lessons plus a few bonus lessons on how to prepare for an EMP attack before it strikes and how to survive once it does It doesn't matter whether you are just the average person looking to become a little more prepared for an EMP attack or are already a seasoned survivalist looking for more ways to become prepared as there is valuable information that you will learn from this book
