

Review Sheet - Chapter 14, 15: Waves, Energy Transfer, Sound waves

Definitions:

Wave - a disturbance that transfers energy through matter or space without transferring mass.

Wave Pulse - a single or short disturbance that transfers energy through matter or space without transferring mass.

Periodic Wave - a rhythmic disturbance that transfers energy through matter or space without transferring mass.

Mechanical wave - a wave which needs a medium (water, air, rope, spring) to travel (i.e. sound, earthquake, ocean wave)

Electromagnetic waves - a wave which can travel through a vacuum (radio, light, magnetic)

Transverse wave - a wave which vibrates perpendicular to the direction of wave (i.e. a wave on a rope or spring)

Longitudinal wave - a wave which vibrates parallel to the direction of wave motion (i.e. liquids and gases)

Examples of waves

Sound

Stringed instrument

Water waves

Earthquake

Type

longitudinal

transverse

both transverse and longitudinal

both transverse and longitudinal

Wave characteristics:

Crest - the high point of a transverse wave

Trough - the low point of a transverse wave

Compression - the compressed portion of a longitudinal wave (corresponds to crest); also called *condensations*.

Rarefaction - the less compressed portion of a longitudinal wave (corresponds to troughs)

Wavelength - the distance between 2 identical parts of wave (as in 2 crests or 2 troughs) or the distance before the wave starts to repeat itself

Period - the time for a full vibration

Frequency - number of vibrations per unit time - units are 1/second or Hertz

Amplitude - vertical distance between rest position (or equilibrium point) and crest (or trough)

- the greater the amplitude, the greater the energy transferred

Rest position - the position which a wave will be in equilibrium (when no wave is traveling)

Speed - is the product of wavelength and frequency (speed of a wave depends only upon the medium it is traveling in (not amplitude, frequency, or wavelength))

Node - the part of the wave which is not moving

Phase - successive points on a wave which are identical in amplitude and direction

Concepts:

- Waves transfer energy, not matter
- The # of oscillations (waves) passing a given point per unit time is the frequency
- At a boundary, a transmitted pulse will always continue upright.
- At a boundary, a reflected pulse will invert if it passes from a less to more dense medium.
- At a boundary, a reflected pulse will stay upright or crest (not invert) if it passes from a more to less dense medium.
- At a boundary, velocity and wavelength may change, but frequency and period will not.

Superposition - when 2 or more waves traveling in the same medium combine to form one wave (algebraic addition).

Constructive interference - when amplitudes of 2 waves are added together to form a larger amplitude wave

Destructive interference - when amplitudes of 2 waves cancel each other out.
