

Chemistry Chapter 5 Guided Reading Questions

1. How did John Newlands arrange the known elements? A. By periodicity, the "Law of Octaves," that every eight elements have similar chemical and physical properties.
2. What pattern did the elements in Newlands' arrangement follow? A. again, the "law of octaves," every eight elements had similar properties (see the worksheet packet, front page)
3. Why? (Meyer helped Mendeleev)
4. What is Mendeleev credited for first developing? A. The first periodic table, arranged by atomic "MASS."
5. Why was his periodic table widely accepted? A. Elements were found to be ordered by increasing atomic mass had similar chemical and physical properties AND he could predict patterns of behavior in unknown elements. pgs
6. What was found to be wrong with Mendeleev's periodic table? A. The increasing atomic mass was sometimes not predictable of all properties because the Masses are inconsistent (we now know those are due to isotopes of elements)
7. MODEL? A. ranged periodic table according to "increasing atomic number"
8. Periodic law: When elements are arranged according to increasing atomic number, (originally, atomic masses by Mendeleev's), fall into recurring groups, so that elements with similar physical and chemical properties occur at regular intervals, in other words, relationships and similarities in their properties can be observed.
9. Groups are the VERTICAL COLUMNS (up and down) on the periodic table. Elements in the same group have similar chemical properties. PERIODS ARE THE ROWS.
10. Representative elements are the s- and p-block elements, groups 1-2 and 13-18.
11. Transition elements are the transition metals in the d-block, groups 3-12.
12. Metals are elements that make up 75% of the periodic table. They are shiny, hard solids that are ductile, can conduct electricity, and malleable (able to be used for materials such as for building and construction).
13. Nonmetals are at the far right side of the periodic table (p-groups, 13-18) and are mostly gases. Some are liquids, some are brittle solids (not conductors of electricity) such as sulfur and phosphorus.
14. Metalloids are elements that have properties of both metals and nonmetals.

Section 2: Classification of the Elements

1. What are valence electrons? A. The electrons in the outermost s and p-orbital level of an atom. Atoms in the same group in the s and p-blocks have the same number of valence electrons (1,2 have 1,2 valence electrons, respectively, and 13-18 have 3-8). Elements in the same group have similar chemical properties.
2. What is the relationship between valence electrons and period on the periodic table? A. The period number indicates the outer/principle energy level the valence electrons are in.

Chemical Pedagogy Keith S Taber, 2024-12-20 How should chemistry be taught in schools colleges and universities Chemical Pedagogy discusses teaching approaches and techniques the reasoning behind them and the evidence for their effectiveness The book surveys a wide range of different pedagogic strategies and tactics that have been recommended to better engage learners and provide more effective chemistry teaching These accounts are supported by an initial introduction to some key ideas and debates about pedagogy the science of teaching Chemical Pedagogy discusses how teaching innovations can be tested to inform research based practice Through this book the author explores the challenges of carrying out valid experimental studies in education and the impediments to generalising study results to diverse teaching and learning contexts As a result the author highlights both the need to read published studies critically and the value of teachers and lecturers testing out recommended innovations in their own classrooms Chemical Pedagogy introduces core principles from research into human cognition and learning to provide a theoretical perspective on how to best teach for engagement and understanding An examination of some of the more contentious debates about pedagogy leads to the advice to seek optimally guided instruction which balances the challenge offered to learners with the level of support provided This provides a framework for discussing a wide range of teaching approaches and techniques that have been recommended to those teaching chemistry across educational levels including both those intended to replace teaching from the front and others that can be built into traditional lecture courses to enhance the learning experience

Paving the way towards authentic chemistry teaching - A contribution to teachers' professional development Andrea Schumacher, 2015-05-15 Ein angemessenes Verständnis der Naturwissenschaften stellt eine Schlüsselkomponente naturwissenschaftlicher Grundbildung dar Für die entsprechende unterrichtliche Gestaltung spielen die Vorstellungen der Lehrkräfte der Naturwissenschaften eine entscheidende Rolle und anwendbares Meta Wissen gilt als zu erreichende Qualifikation im Lehramtsstudium Im vorliegenden Forschungsprojekt wird im Rahmen von qualitativen Studien erhoben welche Vorstellungen Lehramtsstudierende der Chemie als Naturwissenschaft besitzen und wie die Studierenden unterstützt werden können ein fundiertes Verständnis zu entwickeln und dieses praktisch zu transformieren Auf Grundlage der Ergebnisse wird ein Modul für die Lehrerbildung entwickelt das den Weg bereitet authentisch der Chemie zu unterrichten An adequate understanding about science represents one key component of scientific literacy Teachers conceptions about science play a crucial role for the design of appropriate lessons

and applicable meta knowledge is considered as a qualification to be achieved during university teacher education In this thesis qualitative studies are conducted to evaluate which pre conceptions about chemistry as a science teacher students possess and how students can be supported in developing an informed understanding as well as in practically transforming it On the basis of the results a module for teacher education is developed which paves the way for authentic chemistry teaching
