Their work showed that *Escherichia coli* (the "bad" bacteria) couldn't infect the cells unless the cells had a certain receptor on their surface. The researchers found that the receptor was made of a protein called *CD4*, which is also found on the surface of T cells. This suggests that the virus might be able to infect T cells, which are the cells that fight off infections. The researchers also found that the virus was able to infect cells that had a certain receptor on their surface, which is called *CD4*.
