Isao Tanihata,Hiroshi Toki,Toshitaka Kajino,2023-09-04 This handbook is a comprehensive systematic source of modern

nuclear physics It aims to summarize experimental and theoretical discoveries and an understanding of unstable nuclei and their exotic structures which were opened up by the development of radioactive ion RI beam in the late 1980s The handbook

comprises three major parts In the first part the experiments and measured facts are well organized and reviewed The

second part summarizes recognized theories to explain the experimental facts introduced in the first part Reflecting recent

synergistic progress involving both experiment and theory the chapters both parts are mutually related The last part focuses

on cosmo nuclear physics one of the mainstream subjects in modern nuclear physics Those comprehensive topics are

presented concisely Supported by introductory reviews all chapters are designed to present their topics in a manner accessible to readers at the graduate level The book therefore serves as a valuable source for beginners as well helping them to learn modern nuclear physics      **Medical Isotope Production Without Highly Enriched Uranium** National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on Medical Isotope Production Without Highly Enriched Uranium, 2009-05-27 This book is the product of a congressionally mandated study to examine the feasibility of eliminating the use of highly enriched uranium HEU2 in reactor fuel reactor targets and medical isotope production facilities The book focuses primarily on the use of HEU for the production of the medical isotope molybdenum 99 Mo 99 whose decay product technetium 99m3 Tc 99m is used in the majority of medical diagnostic imaging procedures in the United States and secondarily on the use of HEU for research and test reactor fuel The supply of Mo 99 in the U S is likely to be unreliable until newer production sources come online The reliability of the current supply system is an important medical isotope concern this book concludes that achieving a cost difference of less than 10 percent in facilities that will need to convert from HEU to LEU based Mo 99 production is much less important than is reliability of supply      *Translation Title List and Cross Reference Guide* U.S. Atomic Energy Commission, 1961      Nuclear Medicine; a Guide to Recent Literature International Atomic Energy Agency, 1968
