*The Quest for Symbolic Communication in Non-Human Animals* Ulrike Griebel, D. Kimbrough Oller, Irene M. Pepperberg, 2024-06-13 Human language is unique among animals We assume that complex cognitive capacities in general and language in particular evolved gradually and thus are manifest in different kinds and or degrees in other animals demonstrating social communication This assumption is supported by the fact that we can train social species from very different groups of animals e g great apes dolphins dogs parrots to understand and in several cases even use abstract symbols for communication with humans and conspecifics Even simple grammatical rules for sequences of 2 3 symbols can be trained to be understood by several species e g great apes dogs dolphins Even though human language training in these species takes considerable time and effort it convinces us that cognitive foundations for language are present in other species and given the relevant selection pressures symbolic communication could evolve in other species

*Seven Challenges for the Science of Animal Minds* Mike Dacey, 2025-01-28 The scientific study of animal minds is difficult This book examines the most significant reasons this is so seven challenges for the science to overcome Researchers are aware of these challenges but few take any of them head on and none address them collectively Despite this focus on challenges the book's attitude is optimistic rather than critical these are challenges for the science not challenges to the science Researchers have made substantial progress as things are But taking the challenges head on can help build an even stronger more vibrant science The seven challenges are 1 underdetermination of theory by data 2 anthropomorphic bias 3 the difficulty of modeling cognitive processes 4 integrating across disciplines 5 ecological validity 6 small sample sizes and 7 measuring consciousness For each the book suggests rethinking the challenge and reorienting our attempts to address it These approaches are novel general ways of thinking that will help researchers work through the challenges and perhaps find solutions appropriate to their own research Each of the main chapters takes on one challenge Each also includes an empirical case study from social

reasoning in chimpanzees to foraging in honeybees to consciousness in octopuses Along the way a big picture framework emerges for drawing conclusions about animal minds based on experimental evidence In this framework the role of any individual piece of the science is limited any individual experiment model claim or argument can only tell us so much When we are appropriately modest about each piece conclusions about animal minds must be arrived at by holistically considering all the evidence we can get This is a work in the philosophy of science but it is written to be accessible to any philosopher interested in empirical issues relating to the mind researchers in any of the related sciences including psychology neuroscience ethology and evolutionary biology as well as intermediate to advanced students
