Geometric Hashing Fouad Sabry,2024-05-11 What is Geometric Hashing In computer science geometric hashing is a method for efficiently finding two dimensional objects represented by discrete points that have undergone an affine transformation though extensions exist to other object representations and transformations In an off line step the objects are encoded by treating each pair of points as a geometric basis The remaining points can be represented in an invariant fashion with respect to this basis using two parameters For each point its quantized transformed coordinates are stored in the hash table as a key and indices of the basis points as a value Then a new pair of basis points is selected and the process is repeated In the on line recognition step randomly selected pairs of data points are considered as candidate bases For each candidate basis the remaining data points are encoded according to the basis and possible correspondences from the object are found in the previously constructed table The candidate basis is accepted if a sufficiently large number of the data points index a consistent object basis How you will benefit I Insights and validations about the following topics Chapter 1 Geometric hashing Chapter 2 Analytic geometry Chapter 3 Cartesian coordinate system Chapter 4 2D computer graphics Chapter 5 Coordinate system Chapter 6 Translation geometry Chapter 7 Hough transform Chapter 8 Scale invariant feature transform Chapter 9 Homography Chapter 10 Geometric feature learning II Answering the public top questions about geometric hashing III Real world examples for the usage of geometric hashing in many fields Who this book is for Professionals undergraduate and graduate students enthusiasts hobbyists and those who want to go beyond basic knowledge or information for any kind of Geometric Hashing **Image Based Modeling and Rendering** Fouad Sabry,2024-05-05 What is Image Based Modeling and Rendering In computer graphics and computer vision image based modeling and rendering IBMR methods rely on a set of two dimensional images of a scene to generate a three dimensional model and then render some novel views of this scene How you will benefit I Insights and validations about the following topics Chapter 1 Image based modeling and rendering Chapter 2 2D computer graphics Chapter 3 3D projection Chapter 4 Light field Chapter 5 View synthesis Chapter 6 Autoencoder Chapter 7 Structure tensor Chapter 8 Segmentation based object categorization Chapter 9 2D to 3D conversion Chapter 10 Variational autoencoder II Answering the public top questions about image based modeling and rendering III Real world examples for the usage of image based modeling and rendering in many fields Who this book is for Professionals undergraduate and graduate students enthusiasts hobbyists and those who want to go beyond basic knowledge or information for any kind of Image Based Modeling and Rendering Line Drawing Algorithm Fouad
