Multimodal Signals: Cognitive and Algorithmic Issues Anna Esposito, Amir Hussain, Maria Marinaro, Raffaele Martone, 2009-02-27 This book constitutes the thoroughly refereed post conference proceedings of the COST Action 2102 and euCognition supported international school on Multimodal Signals Cognitive and Algorithmic Issues held in Vietri sul Mare Italy in April 2008 The 34 revised full papers presented were carefully reviewed and selected from participants contributions and invited lectures given at the workshop The volume is organized in two parts the first on Interactive and Unsupervised Multimodal Systems contains 14 papers The papers deal with the theoretical and

computational issue of defining algorithms programming languages and determinist models to recognize and synthesize multimodal signals These are facial and vocal expressions of emotions tones of voice gestures eye contact spatial arrangements patterns of touch expressive movements writing patterns and cultural differences in anticipation of the implementation of intelligent avatars and interactive dialogue systems that could be exploited to improve user access to future telecommunication services The second part of the volume on Verbal and Nonverbal Communication Signals presents 20 original studies devoted to the modeling of timing synchronisation between speech production gestures facial and head movements in human communicative expressions and on their mutual contribution for an effective communication

The Voice Catchers Joseph Turow, 2021-05-18 Your voice as biometric data and how marketers are using it to manipulate you Only three decades ago it was inconceivable that virtually entire populations would be carrying around wireless phones wherever they went or that peoples exact locations could be tracked by those devices We now take both for granted Even just a decade ago the idea that individuals voices could be used to identify and draw inferences about them as they shopped or interacted with retailers seemed like something out of a science fiction novel Yet a new business sector is emerging to do exactly that The first in depth examination of the voice intelligence industry The Voice Catchers exposes how artificial intelligence is enabling personalized marketing and discrimination through voice analysis Amazon and Google have numerous patents pertaining to voice profiling and even now their smart speakers are extracting and using voice prints for identification and more Customer service centers are already approaching every caller based on what they conclude a caller s voice reveals about that person s emotions sentiments and personality often in real time In fact many scientists believe that a person s weight height age and race not to mention any illnesses they may have can also be identified from the sound of that individual s voice Ultimately not only marketers but also politicians and governments may use voice profiling to infer personal characteristics for selfish interests and not for the benefit of a citizen or of society as a whole Leading communications scholar Joseph Turow places the voice intelligence industry in historical perspective explores its contemporary developments and offers a clarion call for regulating this rising surveillance regime
