Babbage, 2012-09-24 The middle school years are a maze of academic duties human growth and self development discovering self identity and increasing social interaction with other people This maze can be an adventure of achievement and opportunity or it can be a struggle of difficulty and disappointment As these experiences are the impetus or foundation for many later achievements in academics careers and personal life it is imperative that educators maximize these formative years by helping middle school students successfully travel through this maze despite its ups and downs its twists and turns and its new challenges to master and the old issues to resolve For instance educators must support students who have fallen behind so as to thwart their reduced likelihood of turnaround in high school Likewise educators must challenge exceptional students in order to perpetuate their enthusiasm for learning and prepare them for college studies By discussing the comprehensive roles and duties of school administrators counselors and teachers The Power of Middle School addresses how to maximize middle school curriculum and extra curricular activities for the academic personal and professional benefits of all students Journal of Character Education Jacques S. Understanding the Intersections of Race, Gender, and Gifted Education Nicole M. Joseph, 2020-06-01 This book seeks to understand the complexities of talented and high performing Black girls and women in STEM across the P 20 trajectory Analogously this volume aims to understand the intersections between giftedness its identification and racial gender and academic discipline identities The dearth of literature on this subject suggests that Black girls and women have unique experiences in gifted programming in large part because of factors associated with gifted programs in general Key factors affecting Black students and Black girls in particular are identification and underrepresentation These factors can be shaped by interlocking systems of racism classism gender bias and other forms of oppression Teachers in the P 12 educational system are the first identifiers for gifted programming and look for student characteristics such as natural leadership inquisitiveness and students desire to be in gifted programs Because many Black girls are stereotyped and teachers rarely have deep understanding of cultural differences Black girls are less likely to be identified for gifted programming More specifically Black girls lack of representation in gifted mathematics or STEM programs contradicts research that finds that girls reach several developmental advantages ahead of boys For example research has shown that girls talk and read earlier receive higher grades in elementary school and drop out less often than boys Other studies have also shown that Black girls have higher mathematics career aspirations than their White and Latina female peers yet they are rarely represented in gifted math and Advanced Placement AP math programs Furthermore the underrepresentation of urban low income African American students in gifted education is related to low test scores student and family choice a lack of teacher referral and a mismatch between home and school cultures Some high performing Black girls and women are participating in programs that nurture and support their racial and gender identities and contribute to them developing into strong and efficacious girls and women who have agency in their lives This anthology includes studies that illustrate the complexities of intersectionality in various STEM programs while also demonstrating that increasing access to STEM for Black girls and women is doable
