Crop Genetic Resources Climate Issues Economics And Policy:

Crop Genetic Resources Sean W. Price, 2015 Climate change poses significant risks to future crop productivity as temperatures rise rainfall patterns become more variable and pest and disease pressures increase The use of crop genetic resources to develop varieties more tolerant to rapidly changing environmental conditions will be an important part of agricultural adaptation to climate change Finding new genetic traits that can facilitate adaptation and incorporating them into commercially successful varieties is time consuming expensive and technically difficult This book reviews the types of genetic resources the ways they have been used and how they might be used in the future The book also discusses economic scientific and institutional factors that will determine the extent of genetic resource use and the benefits it might bring to climate change adaptation Moreover this title evaluates economic and institutional factors influencing the flow of genetic resources including international agreements and their significance for agricultural research and development in the United States Finally the book examines the composition of U S and international seed markets regulations affecting agricultural seeds the structure and evolution of the seed industry and trends in private and public R D in plant breeding Using Crop Genetic Resources to Help Agriculture Adapt to Climate Change :. Paul W. Heisey, 2015 *Food Security and Climate Change* Shyam Singh Yadav, Robert J. Redden, Jerry L. Hatfield, Andreas W. Ebert, Danny Hunter, 2019-02-26 This book looks at the current state of food security and climate change discusses the issues that are affecting them and the actions required to ensure there will be enough food for the future By casting a much wider net than most previously published books to include select novel approaches techniques genes from crop diverse genetic resources or relatives it shows how agriculture may still be able to triumph over the very real threat of climate change Food Security and Climate Change integrates various challenges posed by changing climate increasing population sustainability in crop productivity demand for food grains to sustain food security and the anticipated future need for nutritious quality foods It looks at individual factors resulting from climate change including rising carbon emission levels increasing temperature disruptions in rainfall patterns drought and their combined impact on planting environments crop adaptation production and management The role of plant genetic resources breeding technologies of crops biotechnologies and integrated farm management and agronomic good practices are included and demonstrate the significance of food grain production in achieving food security during climate change Food Security and Climate Change is an excellent book for researchers scientists students and policy makers involved in agricultural science and technology as well as those concerned with the effects of climate change on our environment and the food industry *Crop Genetic Resources as a Global Commons* Michael Halewood, Isabel López Noriega, Sélim Louafi, 2013 Our food and livelihood security depend on the sustained management of the diverse biological resources that make up the Earth's plant genetic resources This book is about the creation management and use of the global crop commons based upon the International Treaty on Plant Genetic Resources for Food and Agriculture *Genetic Resource*

Policies , Conservation of Genetic Resources Detlef Virchow,2012-12-06 Over the past decade the importance of natural resources for sustainable agricultural development has been increasingly discussed at international forums and conferences. Aside from the sustainable management of soil, water and air, it now seems to be accepted that the sustainable management of genetic resources is one of the four indispensable preconditions for a sustainable agriculture. The discussion on conservation of plant genetic resources for food and agriculture (PGRFA) however has to reflect the costs of conservation as well. These have not yet been discussed intensively. The study analyzes the conservation costs of plant genetic resources; it also assesses the effectiveness of conservation and the efficiency of the different conservation instruments. It is based on extensive surveys in relevant countries. Following the detailed cost and impact analysis, the results show that the effectiveness of conservation strategies may be increased.

Farmers and Plant Breeding Ola Tveitereid Westengen, Tone Winge,2019-10-02 This book presents the history of and current approaches to farmer breeder collaboration in plant breeding, situating this work in the context of sustainable food systems as well as national and international policy and law regimes. Plant breeding is essential to food production, climate change adaptation and sustainable development. This book brings together experienced practitioners and researchers involved in collaborative breeding programmes across a diversity of crops and agro ecologies around the world. Case studies include collaborative sorghum and pearl millet breeding for water stressed environments in West Africa; participatory rice breeding for intensive rice farming in the Mekong Delta; and evolutionary participatory quinoa breeding for organic agriculture in North America. While outlining the challenges, the volume also highlights the positive impacts such as yield increases, farmers' empowerment in the innovation and development processes, contributions to maintenance of crop genetic diversity and adaptation to climate change. This collection offers a range of perspectives on enabling conditions for farmer breeder collaboration in plant breeding in relation to biodiversity agreements such as the Plant Treaty, trade agreements and related intellectual property rights (IPR) regimes and national seed policies and laws. Relevant to a wide audience including practitioners with experience in plant breeding and management of crop genetic resources and those with a broader interest in agriculture and development as well as students of international cooperation and development, this volume is a timely addition to the literature.

Crop Genetic Diversity in the Field and on the Farm Devra Ivy Jarvis, T. Hodgkin, A. H. D. Brown, John D. Showcasing the findings of seven experts representing the field of ecology, crop breeding, genetics, anthropology, economics and policy, this invaluable resource places farmer managed crop biodiversity squarely in the center of the science needed to feed the world and restore health to our productive landscapes. It will prove to be an essential tool in the training of agricultural and environmental scientists seeking the solutions necessary to ensure healthy, resilient ecosystems for future generations.
