Essays in Post-Critical Philosophy of Technology Mihály Héder, Eszter Nádas, 2019-02-15 Technology in all its forms has had and continues to have an indisputable impact on society and culture Philosophy of technology seeks to understand this impact and the meaning of technology for society and culture Although its origins can be traced back to the Greeks it wasn't until the late 19th century to the beginning of the 20th century that it gained ground as a philosophical discipline Now more than ever it is considered an essential philosophical enterprise The Budapest Workshop on Philosophy of Technology was a lively and successful event that sought to discuss reflect on and apply this branch of philosophical inquiry to both historical and contemporary examples Importantly the contributors methodological approaches were influenced by although not limited to Michael Polanyi's term post critical Moving beyond the rigidity of past approaches the selected essays were driven by two lines of inquiry what has been the historical role of technology in social and scientific change And how can a post critical approach enhance and extend our understanding of philosophy of technology This edited volume begins by exploring the role of technology in social and scientific developments from a historical perspective before moving towards a discussion of philosophy of technology from a Post Critical epistemic stance Free from the constraints of previous methodologies the third part of this work engages with the term Post Critical in its broadest sense The contributors to this section consider the phenomenology of the body and the influence of technology on our lives Finally the four concluding chapters of this book apply this philosophical approach to a wide range of contemporary problems from Decision Support Systems to Crisis Communication

technologies that promote constructive learning Further this book explores the relationship between constructivist learning digital content and learning technologies A primary argument in this book is that constructivist teaching strategies such as collaborative learning coupled with digital content and purposeful learning technologies could benefit student learning in ways that are different from those practiced in traditional non digital learning environments Covering topics such as instructional design self efficacy and library engagement this major reference work is an essential resource for pre service teachers teacher educators faculty and administrators of K 20 education librarians researchers and academicians
