Critical Security and Chinese Politics Juha A. Vuori, 2014-10-24 This book examines how critical approaches to security developed in Europe can be used to investigate a Chinese security issue the case of the Falungong The past few decades have produced a rich field of theoretical approaches to security in Europe In this book the security specific notions of securitization the politics of insecurity and emancipation are used as analytical approaches to investigate the anti Falungong campaign in the People's Republic of China This campaign launched in 1999 was the largest security related propaganda campaign since 1989 and was directed against a group of qigong practitioners who were presented as a grave threat to society The campaign had major impacts as new security legislation was established and human rights organizations reported severe mistreatment of practitioners This book approaches one empirical case with three approaches in order to transcend the tendency to pit one approach against another It shows how they highlight different aspects in investigation and how they can be combined to gain more comprehensive insights and thereby invigorate renewed debate in the field Furthermore this is used as a vehicle to discuss more general philosophical issues of theory development and theory development and will assist students to comprehend the effects research framework selection has on a piece of research Such discussions are necessary in order to apply the frameworks in investigations that go beyond the socio political context they were originally developed in This book will be of interest to students of critical security studies Chinese politics research methods and IR in general

Research Methods in Critical Security Studies Mark B. Salter, Can E. Mutlu, Philippe M. Frowd, 2023-05-12 This textbook surveys new and emergent methods for doing research in critical security studies filling a gap in the literature The second edition has been revised and updated This textbook is a practical guide to research design in this increasingly established field Arguing for serious attention to questions of research design and method the book develops accessible scholarly overviews of key methods used across critical security studies such as ethnography discourse analysis materiality and corporeal methods It draws on prominent examples of each method's objects of analysis relevant data and forms of data collection The book's defining feature is the collection of diverse accounts of research design from scholars working within each method each of which is a clear and honest recounting of a specific project's design and development This second edition is extensively revised and expanded Its 33 contributors reflect the sheer diversity of critical security studies today representing various career stages scholarly interests and identities This book is systematic in its approach to research design but keeps a reflexive and pluralist approach to the question of methods and how they can be used The second edition has a new forward looking conclusion examining future research trends and challenges for the field

This book will be essential reading for upper level students and researchers in the field of critical security studies and of much interest to students in International Relations and across the social sciences

Critical Security Studies in the Digital Age Joseph Downing, 2023-01-23 This book demonstrates that the disciplinary boundaries present within international relations approaches to security studies are redundant when examining social media and inter and multi disciplinary analysis is key A key result of the analysis undertaken is that when examining the social media sphere security scholars need to expect the unexpected This is because social media enables users to subvert contest and create security narratives with symbols and idioms of their choice which can take into account traditional security themes but also unexpected and under explored themes such as narratives from the local context of the users towns and cities and the symbolism of football clubs The book also explores the complex topography of social media when considering constructions of security The highly dynamic topography of social media is neither elite dominated and hierarchical as the Copenhagen School conceptualises security speak However neither is it completely flat and egalitarian as suggested by the vernacular security studies non elite approach Rather social media s topography is shifting and dynamic with individuals gaining influence in security debates in unpredictable ways In examining social media this book engages with the emancipatory burden of critical security studies This book argues that it remains unfulfilled on social media and rather presents a thin notion of discursive emancipation where social media does provide the ability for previously excluded voices to participate in security debates even if this does not result in their direct emancipation from power hierarchies and structures offline

Critical Security Methods Claudia Aradau, Jef Huysmans, Andrew Neal, Nadine Voelkner, 2014-08-13 Critical Security Methods offers a new approach to research methods in critical security studies It argues that methods are not simply tools to bridge the gap between security theory and security practice Rather to practise methods critically means engaging in a more free and experimental interplay between theory methods and practice This recognises that the security practices we research are often methods in their own right as forms of surveillance data mining visualisation and so on and that our own research methods are themselves practices that intervene and interfere in those sites of security and insecurity Against the familiar methodological language of rigour detachment and procedural consistency Critical Security Methods reclaims the idea of method as experiment The chapters offer a series of methodological experimentations that assemble concepts theory and empirical cases into new frameworks for critical security research They show how critical engagement and methodological innovation can be practiced as interventions into diverse instances of insecurity and securitisation including airports drug trafficking peasant struggles biometrics and police kettling The book will be a valuable resource for students and researchers in critical security studies politics and international relations

Technology and Agency in International Relations Marijn Hoijtink, Matthias Leese, 2019-04-23 This book responds to a gap in the literature in International Relations IR by integrating technology more systematically into analyses of global politics Technology facilitates accelerates automates and

exercises capabilities that are greater than human abilities And yet within IR the role of technology often remains under studied Building on insights from science and technology studies STS assemblage theory and new materialism this volume asks how international politics are made possible knowable and durable by and through technology The contributors provide empirically rich and pertinent accounts of a variety of technologies relevant to the discipline including drones algorithms satellite imagery border management databases and blockchains Problematising various technologically mediated issues such as secrecy violence and questions of how authority and evidence become constituted in international contexts this book will be of interest to scholars in IR in particular those who work in the subfields of critical security studies International Political Economy and Global Governance Chapter 7 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Methodology and Emotion in International Relations Eric Van Rythoven, Mira Sucharov, 2019-06-20 This volume offers a state of the art study of the diverse methodological approaches and issues in the study of emotions in international relations research While interest in emotion and affect in IR has grown in recent years there remains an absence of sustained engagement with questions of methodology and method Although much of the field holds the emotions turn as laudable it is commonly seen as facing serious even prohibitive methodological challenges Using a common framework for making discussions of methodology and emotion mutually intelligible this work seeks to address this lacuna and will be of interest to students and scholars of international relations research methods and IR theory

Transformations of Security Studies Gabi Schlag, Julian Junk, Christopher Daase, 2015-10-30 This volume brings together a group of distinguished scholars to engage in a dialogue on key developments in the study of security The book provides a comprehensive overview of theoretical empirical and methodological developments within security studies whose political and societal importance has grown significantly in recent years By bringing together scholars who hold differing perspectives on security this volume provides insights into a variety of approaches and their newest developments including mainstream as well as heterodox perspectives on security Thus it aims to build bridges of communication between different camps by initiating a dialogue on the identity and diversity of security studies It does so in three parts The first part of the book includes paradigmatic approaches to security that are closely connected to major debates in International Relations such as realism institutionalism constructivism as well as approaches to the culture ethics of security and critical security studies The second part places emphasis on the broadening and deepening of the concept of security in recent decades It discusses key empirical frontiers including the continued centrality of the state the link between democracy and security environmental

security as well as financial security The third part of the book presents various methodological approaches to the question of security and peace It provides an overview of new approaches such as the visual turn quantifying security and method combinations This book will be of much interest to students of critical security studies international relations and research methods

Contemporary Security Studies Alan Collins,2025 **Memories of Empire and Entry into International Society** Filip Ejdus,2017-06-14 What is the role of memories for the expansion of international society By drawing on the English School approach to International Relations this edited volume argues that the memories of empire and suzerainty are key to understanding sociological aspects of the expansion of anarchical society The expert contributors adopt a socio historic conceptualization of entry into international society aiming to move beyond the legalist analysis and also explore the impact of identity constructions and collective memories on the expansion of international society Empirically the volume investigates the entry into international society of Belarus Bulgaria Greece Poland Serbia Slovakia and Romania and studies memories that they activated along the way While these memoirs of bygone polities were used by state builders to make sense of international society and legitimise claims of the new entrants they inadvertently also generated tensions and anxieties which in many ways persist until this day Both the theoretical angle and the empirical material presented in this volume are novel additions to the growing body of knowledge in historical International Relations Exploring how memories and experiences of the past still complicate the entrants positions in international society and to what degree ensuing tensions remain today this volume will be of interest to students and scholars of European International Relations particularly those with a focus on Eastern Europe

International Relations' Last Synthesis? J. Samuel Barkin,Laura Sjoberg,2019-02-12 Many scholars intentionally or unintentionally have entangled constructivisms and critical theories in problematic ways either by assigning a critical theoretical politics to constructivisms or by assuming the appropriateness of constructivist epistemology and methods for critical theorizing IR s Last Synthesis makes the argument that these connections mirror IR s grand theoretical syntheses of the 1980s and 1990s and have similar constraining effects on the possibilities of IR theory They have been made without adequate reflection in contradiction to the base assumptions of each theoretical perspective and to the detriment of both knowledge accumulation about global politics and theoretical rigor in disciplinary IR It is not that constructivisms and critical theories have no common ground rather the fact that it has become routine for IR scholars to overstate their common ground is counterproductive to the discovery and utilization of their potential dialogues To that end IR s Last Synthesis argues that scholars using the two in conjunction should be cognizant of rather than gloss over the tensions between the approaches and the tools they have to offer Along these lines the book uses the concept of affordances to look at what each has to offer the other and to argue for a modest reflective specified return to constructivist and critical IR theorizing By rejecting its over simple syntheses this book hews a road toward reviving IR theorizing

The Politics of Globality since 1945 Rens van Munster,Casper Sylvest,2016-05-12 This timely comprehensive

and interdisciplinary volume advances an original argument about the complex roots and multiple politics of globality It shows that technological innovations and decisive developments since 1945 from the nuclear revolution to anthropogenic climate change and debates about the Anthropocene have prompted reflections on the global condition of humanity and helped reshape political communities by making the world appear small manageable and interconnected The contributors stress how human beings have transformed both their habitat and their view of human earth relations since 1945 Such changes have been accompanied by important shifts in political visions prompted new forms of human association encouraged legal and institutional reform and spurred ideas about ecological humility At the same time the spatially all encompassing nature of globality have also informed projects of human mastery and a range of practices historically associated with militarization and a strongly statist conception of national security This volume reflects on these paradoxical relationships their history and contemporary relevance Contributing to the overlapping concerns of four burgeoning fields of study across the humanities and the social sciences globality and globalization studies geopolitics and political geography Anthropocene studies global governance and political theory the book will be of great use to scholars and graduates working in these areas Research Methods in Politics and International Relations Christopher Lamont, Mieczyslaw P.

Carey,2020-12-17 Peacebuilding Paradigms focuses on how seven paradigms from the Comparative Politics International Relations and Policy Analysis subfields Realism Liberalism Constructivism Cosmopolitanism Critical Theories Locality and Policy analyze peacebuilding The contributors explore the arguments of each paradigm and then compare and contrast them This book suggests that a hybrid approach that incorporates useful insights from each of these paradigms best explains how and why peacebuilding projects and policies succeed in some cases fail in others and provide lessons learned Rather than merely using a theoretical approach the authors use case studies to demonstrate why a focus on just one paradigm alone as an explanatory model is insufficient This collection directly at how peacebuilding theory affects peacebuilding policies and provides recommendations for best practices for future peacebuilding missions Humour, subjectivity and world politics

Alister Wedderburn,2021-08-17 Questions about the ethical and political boundaries of comedy satire or irony have inspired widespread anxiety in recent years as with the 2015 shootings at the offices of Charlie Hebdo in Paris or the so called locker room banter that defined Donald Trump s 2016 election campaign What then can a turn to humour offer International Relations Drawing on literature across International Relations literary theory cultural studies and sociology Alister Wedderburn argues that humour plays an underappreciated role in the making and unmaking of political subjectivities The book recovers a historical understanding of humour as a way of making a claim to political subjectivity in the face of its denial This function Wedderburn argues is embodied by the ambiguous figure of the parasite a stock character of Greek comic drama The book interrogates three separate sites where political actors have used humour parasitically in order to make political claims and demands In so doing it not only outlines humour s political potential and limitations but also demonstrates how everyday practices can draw from feed into interrupt and potentially transform global political relations Representing the first monograph length study on the politics of humour within International Relations this book makes a timely contribution to debates about the politics of humour subjectivity and everyday life **The Morality of Security** Rita Floyd,2019-04-18 Offers an innovate approach to ethics and security combining securitization theory and the just war tradition **The Oxford Handbook of International Security** Alexandra Gheciu,William C. Wohlforth,2018-03-08 This

Oxford Handbook is the definitive volume on the state of international security and the academic field of security studies. It provides a tour of the most innovative and exciting new areas of research as well as major developments in established lines of inquiry. It presents a comprehensive portrait of an exciting field with a distinctively forward-looking theme focusing on the question: what does it mean to think about the future of international security? The key assumption underpinning this volume is that all scholarly claims about international security, both normative and positive, have implications for the future. By examining international security to extract implications for the future, the volume provides clarity about the real meaning and practical implications for those involved in this field. Yet contributions to this volume are not exclusively forecasts or prognostications, and the volume reflects the fact that within the field of security studies there are diverse views on how to think about the future. Readers will find in this volume some of the most influential mainstream positivist voices in the field of international security as well as some of the best-known scholars representing various branches of critical thinking about security. The topics covered in the Handbook range from conventional international security themes such as arms control, alliances, and Great Power politics to new security issues such as global health, the roles of non-state actors, cyber security, and the power of visual representations in international security. The Oxford Handbooks of International Relations is a twelve-volume set of reference books offering authoritative and innovative engagements with the principal sub-fields of International Relations. The series as a whole is under the General Editorship of Christian Reus-Smit of the University of Queensland and Duncan Snidal of the University of Oxford, with each volume edited by a distinguished pair of specialists in their respective fields. The series both surveys the broad terrain of International Relations scholarship and reshapes it, pushing each sub-field in challenging new directions. Following the example of the original Reus-Smit and Snidal, The Oxford Handbook of International Relations, each volume is organized around a strong central thematic by a pair of scholars drawn from alternative perspectives, reading its sub-field in an entirely new way and pushing scholarship in challenging new directions.

Visual Security Studies Juha Vuori, Rune Saugmann, 2018-08-06. The present volume engages with visuality in security from a variety of angles and explores what the sub-field of Visual Security Studies might be. To structure this experimentation and to encourage a more careful and multifaceted approach to visuality and security, the main conceptual move in this volume is to envision three different transversal meeting points between security and visuality: visuality as a modality active in representations and signs of security; visuality as practice active in enacting security; and visuality as a method active in investigating security. These three approaches structure the book together with three areas in which we see visuality as especially pertinent in relation to security: security technologies that envision security and are themselves the objects of visions of security; spectacles of security and security spectatorship; and in ways of making security visible. In this way, the volume works to sensitize International Relations research to visual forms of knowledge and practice by examining visual aspects of security. At the same time, it allows for debate on how this particular modality of the sensible not only affects what

is visible and what is not but also how authority and truth claims come about and how they are compared and evaluated Through engagement with security via the language or code of the visual it is possible to interrogate how scholars in the field understand visuality as well as the economy grammar and performativity of visual articulation and the production of knowledge The volume also examines how visuality can be used as a method in doing research and as a way of presenting research results Visual Security Studies is not a new theory of security or its study instead the present volume suggests that visuality should be envisioned as an aspect of security studies that can be incorporated into pre existing approaches The aim is to highlight how much of contemporary practice is visual and to foster an increased attentiveness to visuality in security politics security practice and to the possibilities of employing visual research methods in security scholarship This book will be of much interest to students of critical security media studies surveillance studies visual sociology and IR in general
