*Space Infrastructures: From Risk to Resilience Governance* U. Tatar,A.V. Gheorghe,O.F. Keskin,2020-04-17 Space critical infrastructures represent an interdependent system of systems consisting of workforce environment facilities and multidirectional interactions These are essential for the maintenance of vital societal functions such as health safety security mobility and the economic and social well being of people and their destruction or disruption would have a significant impact on society as a whole In all 79 nations and government consortia currently operate satellites with 11 countries operating 22 launch sites Despite creating new challenges this multi actor environment offers opportunities for international cooperation but making the most of these opportunities requires a holistic approach to space critical infrastructure away from strictly defined space technologies and towards understanding the resilience of complex systems and how they are intertwined in reality This book presents papers from the NATO Advanced Research Workshop ARW entitled Critical Space Infrastructure From Vulnerabilities and Threats to Resilience held in Norfolk Virginia USA from 21 22 May 2019 The ARW brought together representatives from academia industry and international organizations in an effort to deepen scientific and technological understanding of space critical infrastructures and explore the implications for national and international space security and resilience It examined space as a critical infrastructure from a multidisciplinary perspective in accordance with NATO s Strategic Concept The 29 chapters in the book are divided into six sections covering space infrastructure governance cybersecurity risk resiliency and complexity emerging technologies such as block chain artificial intelligence and quantum computing application domains and national approaches and applications Managing the Complexity of Critical Infrastructures Roberto Setola,Vittorio Rosato,Elias Kyriakides,Erich Rome,2017-02-10 This book is open access under a CC BY 4 0 license This book summarizes work being pursued in the context of the CIPRNet Critical Infrastructure Preparedness and Resilience Research Network research project co funded by the European Union under the Seventh Framework Programme FP7 The project is intended to provide concrete and on going support to the Critical Infrastructure Protection CIP research communities enhancing their preparedness for CI related emergencies while also providing expertise and technologies for other stakeholders to promote their understanding and mitigation of the consequences of CI disruptions leading to enhanced resilience The book collects the tutorial material developed by the authors for several courses on the modelling simulation and analysis of CIs representing extensive and integrated CIP expertise It will help CI stakeholders CI operators and civil protection authorities understand the complex system of CIs and help them adapt to these changes and threats in order to be as prepared as possible for mitigating emergencies and crises affecting or arising from CIs *OECD Reviews of Risk Management Policies Good Governance for Critical Infrastructure Resilience* OECD,2019-04-17 Critical

infrastructures are the backbone of modern interconnected economies The disruption of key systems and essential services such as telecommunications energy or water supply transportation or finance can cause substantial economic damage This report looks at how to boost critical infrastructure resilience in a dynamic risk landscape and discusses policy options and governance models to promote up front resilience investments

**Strengthening Critical Infrastructure Resilience by Identifying and Redressing Recurring Gaps and Systemic Barriers** Russell E. Bowman, 2016 This dissertation explores the concept of disaster resilience in the context of homeland security in general and critical

infrastructure in particular as assessed at local and regional levels It features two related but distinct research foci 1 identifying and exploring recurring resilience gaps and 2 identifying and exploring systemic barriers that allow such gaps to emerge or to persist It employs content analysis and cross case synthesis of 33 in depth case studies generated by the Department of Homeland Security s Regional Resiliency Assessment Program RRAP In so doing this research also explores the ability of and challenges with using the concept of resilience as an operational construct for reducing all hazards risk and improving homeland security more broadly Building on the work of those who study the resilience of communities and critical infrastructure assets and systems especially with respect to their interaction with the communities and larger systems within which they are situated this dissertation validates prior research by applying similar analyses to new data i e the RRAP case studies In brief the RRAP data suggest that four recurring resilience gaps exist across many if not most infrastructure sectors and geographic regions Specifically these include 1 a dependence on energy aggravated by an insufficiency or complete absence of back up power systems 2 the fact that response and recovery plans and planning seldom include all relevant stakeholders necessary to address known hazards in a comprehensive manner 3 the presence of numerous single or critical points of failure and 4 a related lack of redundancy insufficient system capacity or both that diminishes the resilience of many infrastructure systems Additionally this dissertation s analysis of 33 RRAP Resiliency Assessments affirms the prevalence of five systemic barriers to improving resilience 1 the nation continues to face significant shortcomings in emergency response and recovery coordination efforts at the regional and cross regional levels 2 there is a widespread lack of visibility or understanding of how critical infrastructure components are inter connected and how systems are dependent or interdependent on one another 3 there is a dearth of important critical infrastructure information beyond dependencies and interdependencies that is available to cognizant authorities and operators either because they do not understand why they should seek or insist on gaining access to information that would resolve certain unknowns or because those in possession of relevant information are reluctant to share it 4 there are insufficient incentives and funding in particular for investing in resilience and 5 efficiency is often valued over ensuring continuity of function Drawing on these findings this work explains how there is clear benefit to adopting a systems based function focused view of resilience that is hazard agnostic It also suggests the importance of further study concerning the barriers that underlie resilience gaps to facilitate broader understanding of the challenges we face and proposes a framework for divining and analyzing linkages between common gaps and barriers In closing this dissertation suggests ways to further exploit the DHS program that is the focus of this research the necessity of sharing subsequent DHS Resiliency Assessments more widely and the related need to make the RRAP data on which the program s assessments are based more accessible to researchers

Industrial Control Systems Security and Resiliency Craig Rieger,Indrajit Ray,Quanyan Zhu,Michael A. Haney,2019-08-29 This book provides a comprehensive overview of the key concerns as well as research challenges in designing secure and resilient Industrial

Control Systems ICS It will discuss today's state of the art security architectures and couple it with near and long term research needs that compare to the baseline It will also establish all discussions to generic reference architecture for ICS that reflects and protects high consequence scenarios Significant strides have been made in making industrial control systems secure However increasing connectivity of ICS systems with commodity IT devices and significant human interaction of ICS systems during its operation regularly introduces newer threats to these systems resulting in ICS security defenses always playing catch up There is an emerging consensus that it is very important for ICS missions to survive cyber attacks as well as failures and continue to maintain a certain level and quality of service Such resilient ICS design requires one to be proactive in understanding and reasoning about evolving threats to ICS components their potential effects on the ICS mission's survivability goals and identify ways to design secure resilient ICS systems This book targets primarily educators and researchers working in the area of ICS and Supervisory Control And Data Acquisition SCADA systems security and resiliency Practitioners responsible for security deployment management and governance in ICS and SCADA systems would also find this book useful Graduate students will find this book to be a good starting point for research in this area and a reference source

**Critical Infrastructure** Wesley A. Bernardes, 2013 Critical infrastructure are those assets the loss of which would result in great harm to the nation's security economy health and safety and morale They include assets necessary to generate and distribute such basic goods and services as electricity drinking water telecommunications banking and finance etc Resilience refers to the ability of a system to resist absorb recover from or successfully adapt to a change in environment or conditions The Critical Infrastructure Task Force has argued that government policies encouraged employing greater defences such as surveillance equipment guards etc around these assets but did less to encourage efforts that would allow assets to continue operating at some level or quickly return to full operation if attacked Such efforts might include increasing redundancies such as having multiple backup power generation capability or designing more robust systems for the future such as using more hardened concrete for stronger fixed facilities This book discusses the concept of resilience in the context of critical infrastructure and homeland security It also identifies and discusses issues related to the evolution of policy and programs at the Department of Homeland Security DHS that are meant to or could promote the resiliency of the nation's critical infrastructure
