Diets and Sustainability. Comparing officially recommended diets and their environmental impacts Pascal Schneider, 2020-01-22 Project Report from the year 2020 in the subject Environmental Sciences grade VG Uppsala University Earth Sciences course Energy Water and Food language English abstract It will be a big issue in the future to combine diets with the planetary boundaries Not only unhealthy eating habits should be reduced through education and transparency of ingredients Also the environmental impact will play a role to keep food production possible in the future The aim of this report is to investigate how the environmental impact of diets over time changed The focus will be on German food recommendations Food plates from the German Nutrition Society DGE from 1955 until today will be analyzed as possible diets that are seen as practicable and healthy from the respective time perspective The environmental impact can be externalities like GHG emissions biodiversity loss eutrophication et cetera The report stays broader with the externalities and will use a literature analysis to find out how a diet in general can be seen both as healthy and environmentally friendly rather than focusing on one outcome Not only is climate change influencing food production Additionally the food sector is the main accelerator of climate change responsible for 10-12 % of total human greenhouse gas GHG emissions Increasing crop production is made possible through a higher yield per hectare but agriculture today is more and more reliant on fertilizer and pesticide use which is accelerating biodiversity loss Agriculture influences the phosphorus and nitrogen cycles leading to water pollution and eutrophication Pesticide use and monoculture jeopardize pollinators and biodiversity Food recommendations by the German Nutrition Society DGE have been well developed over time but give a more superficial impression of a healthy diet Sustainability aspects are rather randomly implemented what shows that health and sustainability correlate The diet can still be improved in GHG emissions for example However consumption patterns in today's societies are still far away from the diet recommendations too high in animal products too low in vegetable consumption This so called western diet is a driver of civilization diseases biodiversity loss and GHG emissions Food Security and

Sustainability George Mergos, Marina Papanastassiou, 2016-11-26 This edited volume brings together contributions from experts on a range of food security issues and examines them through a number of case studies A Millennium Development goal and important policy concern food security is experiencing renewed interest due to globalisation which has led to population affluence changing consumption and production and trade patterns The authors discuss how globalisation brings a new dimension to the discussion on public policy on food security and consider the extent to which Global Value Chains GVCs dominate trade investment and international agricultural markets Food Security and Sustainability therefore sheds new light on the nexus of food security and globalization as well as its implications for investment and financing in the agro food sector The volume draws on papers presented at the inaugural Workshop of the Mediterranean Center for Food Security and Sustainable Growth MED SEC an international network of academics focusing on issues of development sustainability and food security

Proceedings of the International Symposium on Underutilized Plants for Food Security, Nutrition, Income and Sustainable Development, 2009 **Towards Sustainable Global Food Systems** Ruerd Ruben, Jan Verhagen, 2019-04-30 One of the major knowledge challenges in the domain of Resilient and Sustainable Food Systems refers to the integration of perspectives on consumption patterns that support public health inclusive value chains and environmentally sustainable food production While there is a long record of the analysis of separate interventions this special issue generates integrated insights provides cross cutting perspectives and outlines practical and policy solutions that address these global challenges The collection of papers promotes the view that sustainable food systems require thorough insights into the structure and dynamics of agri food production systems the drivers for integrating food value chains and markets and key incentives for supporting healthier consumer choices On the production side potential linkages between agricultural commercialization and intensification and their effects for food security and nutritional outcomes are analyzed Value Chains are assessed for their contribution to improving exchange networks and markets for food products that simultaneously support efficiency circularity and responsiveness Individual motives and market structures for food consumption need to be understood in order to be able to outline suitable incentives to enhance healthy dietary choice The contributed papers focus on interfaces between food system activities and processes of adaptive change that are critical for overcoming key constraints and trade offs between sustainable food and healthy diets
