Human risk assessments are a precondition for virtually all industrial action or environmental regulation all the more  
essential in a world where chemical and environmental hazards are becoming more abundant These documents catalog  
potential environmental toxicological ecological or other harms resulting from a particular hazard from chemical spills to  
construction projects to dangerous workplaces They turn on a number of variables of which the most significant is the degree  
of human exposure to the hazardous agent or process Human and Ecological Risk Assessment combines the virtues of a  
textbook and reference work to introduce and analyze these vital documents Beginning with the foundational theory of  
human health risk assessment it then supplies case studies and detailed analysis illustrating the practice of producing risk  
assessment documents Fully updated and authored by leading authorities in the field the result is an indispensable work
