- **Energy:** Energy. The energy of motion.
- **Motion:** The direction and speed of an object.

- **Force:** A push or pull that causes an object to move, stop, or change directions.
- **Friction:** A force that opposes the motion of an object.
- **Mass:** The amount of matter an object contains.

#### Energy Transfer

When objects collide, the energy from one object transfers to another object. That transfer in energy can change an object's **speed or direction**.

##### Example:

A soccer ball is rolling slowly down the field. A boy kicks the ball. The ball begins moving more quickly and in the opposite direction. Energy was transferred to the ball, causing it to change speed and direction.

#### Friction

Friction is a force that opposes the motion of an object. Friction makes an object slow down.

##### Example:

A hockey puck is sliding across ice. As it rubs against the ice, it creates friction. The friction causes the puck to slow down until it stops.

#### Laws of Motion

The Laws of Motion tell us:

- An object at rest remains at rest unless acted on by a force.
- An object in motion remains in motion unless acted on by a force.

##### Example:

A suitcase is not moving. It will remain at rest until someone pulls the handle, causing it to move.

#### Mass and Force

Mass affects the motion of an object when a force is applied.

**Objects that have the same mass:**  
The greater the force, the greater the change in motion.

**Objects that have different mass:**  
The more massive an object, the less effect a given force will have on that object.

##### Example:

An empty shopping cart is easy to push. As you fill the shopping cart, more force is needed to push it.
