Enhancing financiers' accountability for the social and environmental impacts of biofuels Jan Willem van Gelder, Denise Kouwenhoven, 2011-06-10 This report summarises 20 case studies on investments in the production of biofuel and the feedstocks used for biofuel palm oil soybeans sugarcane and jatropha in forest rich countries in Africa Asia and Latin America The investments were financed by private entrepreneurs public financing and private financial institutions A large number of private financial institutions such as banks asset managers and pension funds were investing most of which are located outside the country where the investment took place Dozens of public financial institutions many of which are foreign play a significant role Since the availability of finance is a crucial precondition for the further growth of the biofuel sector these actors could play an important role in leveraging more sustainability in the sector However our findings suggest that most investors are not yet effectively addressing key environmental and social sustainability challenges either because they lack sustainability policies or because their policies are of insufficient quality Realising the potential influence of investors on minimising the negative social and environmental costs associated with feedstock expansion and biofuel production requires improved dissemination of high quality governance instruments Whilst private and public investors could develop and adopt better policies voluntarily we also discuss regulatory options available to governments in production and consumption countries These options could motivate or assist private financial institutions in developing and applying sound responsible financing policies

Ethanol Angelo Basile, Adolfo Iulianelli, Francesco Dalena, T. Nejat Veziroglu, 2018-08-28 *Ethanol Science and Engineering* reviews the most significant research findings in both ethanol production and utilization The book's contents are divided into four parts beginning with an explanation of the chemical reactions involved during the conversion of ethanol to more complex molecules Other sections focus on various processes and their potential use the modelling of

various chemical processes and finally their economic and environmental impact The book includes the most advanced production processes new technologies applications and the economic role ethanol plays today The book will be great for researchers and engineers in both academic and industry The idea of using ethanol as a fuel is one of the most promising options in the arena of alternative fuels because of its versatile use as an intermediate for producing hydrogen via reforming reactions direct fuel cells feed and or its production from biomass which is also considered a sustainable feedstock Reviews ethanol production methods from biomass Discusses the potential of ethanol as a viable future fuel Includes hydrogen production methods using ethanol in catalytic reforming processes Outlines the various technologies based on ethanol Includes ethanol powered fuel cells

Sugarcane Bioenergy for Sustainable Development Luis A. B. Cortez,Manoel Regis L. V. Leal,Luiz A. Horta Nogueira,2018-10-25 In recent years there has been a rapid expansion of the growing of crops for use in bioenergy production rather than for food This has been particularly the case for sugarcane in Latin America and Africa This book examines the further potential in the context of the food versus fuel debate and as a strategy for sustainable development Detailed case studies of two countries Colombia and Mozambique are presented These address the key issues such as the balance between food security and energy security rural and land development policies and feasibility and production models for expanding bioenergy The authors then assess these issues in the context of broader sustainable development strategies including implications for economics employment generation and the environment The book will be of great interest to researchers and professionals in energy and agricultural development Environment and Society in Ethiopia Girma

Biofuels and the Globalization of Risk James Smith, 2010-11-11 Biofuels and the Globalization of Risk offers a fresh compelling analysis of the politics and policies behind the biofuels story with its technological optimism and often idealized promises for the future This essential new critique argues that investment in biofuels may reconfigure risk and responsibility whereby the global South is encouraged to invest its future in growing biofuel crops often at the expense of food in order that the global North may continue its unsustainable energy consumption unabated and guilt free Thus Smith argues biofuels may constitute the biggest change in North South relationships since colonialism Routledge Handbook of Environmental

Displacement and Migration Robert McLeman, François Gemenne, 2018-03-09 The last twenty years have seen a rapid increase in scholarly activity and publications dedicated to environmental migration and displacement and the field has now reached a point in terms of profile complexity and sheer volume of reporting that a general review and assessment of existing knowledge and future research priorities is warranted So far such a product does not exist The Routledge Handbook of Environmental Displacement and Migration provides a state of the science review of research on how environmental variability and change influence current and future global migration patterns and in some instances trigger large scale population displacements Drawing together contributions from leading researchers in the field this compendium will become a go to guide for established and newly interested scholars for government and policymaking entities and for students and their instructors It explains theoretical conceptual and empirical developments that have been made in recent years describes their origins and connections to broader topics including migration research development studies and international public policy and law and highlights emerging areas where new and or additional research and reflection are warranted The structure and the nature of the book allow the reader to quickly find a concise review relevant to conducting research or developing policy on particular topics and to obtain a broad reliable survey of what is presently known about the subject

Production of Ethanol from Sugarcane in Brazil Márcia Azanha Ferraz Dias de Moraes, David Zilberman, 2014-03-31 The success of Brazil in the large scale production and use of fuel ethanol has been widely discussed and analyzed by other countries interested in adopting policies designed to encourage the use of biofuels Within this context certain questions arise

Could the Brazilian experience be replicated in other countries? What were the conditions that enabled the creation of the Brazilian Proalcool National Ethanol Program and what lessons can be learned? To examine these issues it is important to understand the functioning of the key interconnected markets: those for sugarcane, sugar and ethanol, which from their inception were the objects of extensive government intervention until 1999. Two main conditions enabled the creation of Proalcool: robust production of sugarcane and sugar tightly regulated by the government, which applied the numerous regulations then in place; and the military regime that was in place at the time, whose decision making and enforcement powers were quite broad, facilitating the carrying out of the necessary actions as well as making it easier to coordinate the activities of the various stakeholders and sectors involved. This book increases understanding of the functioning of the sugarcane supply chain in Brazil, not only during the phase of government intervention but also in recent years in the free market environment. The lessons, positive and negative, gleaned from the Brazilian experience can contribute to reflection on and the development of alternative modalities of biofuel production in other countries, making the book of interest to scholars and policy makers concerned with biofuel and renewable resources as well as economic development.
