

STARTING THE ENGINE

TRACTOR SEAT (Figure A3)

Prior to starting the engine adjust the tractor seat to the most comfortable driving position. Both the steel pan and the contoured type of seat are adjustable fore and aft; the steel pan seat utilising the pairs of holes in the seat mounting bracket and the contoured seat by adjustment along the angled slots (1) in the seat base.

The tension in the contoured seat may be adjusted for the operator's weight by turning the cranked handle (2) until the two indicators (3) align. This adjustment should be made with the operator in the seat.

All types of seat may be tilted back to permit the operator to stand.

STARTING (Figure A4)

1. Check that the engine stop-control (1) is pushed in and the handbrake (2) engaged.
2. Depress the foot operated clutch pedal (3) positioned on the left-hand side of the gearbox, and set the main and high/low gear lever (4) in 'Neutral' (the starter motor can only be actuated when the high/low lever is in this position).
3. Set the hand throttle* lever (5) half open (pulling the lever downwards opens the throttle.)
4. Insert the starter key (6) and turn clockwise to the first position (8) to operate the instrument and warning lights and further clockwise (9) to engage the starter.
5. When the engine starts release the key and allow it to return to the first position.
6. Immediately check to ensure that the generator and oil pressure warning lights go out.

* Highway tractors and, for certain territories Agricultural tractors, are fitted with a foot throttle (10) as well as a hand throttle. The throttle pedal is situated on the right-hand footplate. The operation of the foot throttle over-rides the hand throttle which should be set to idling speed when the foot throttle is being used.
