Maness, 2015-04-27 In 2011 the United States government declared a cyber attack as equal to an act of war punishable with conventional military means Cyber operations cyber crime and other forms of cyber activities directed by one state against another are now considered part of the normal relations range of combat and conflict and the rising fear of cyber conflict has brought about a reorientation of military affairs What is the reality of this threat Is it actual or inflated fear or fact based Taking a bold stand against the mainstream wisdom Valeriano and Maness argue that there is very little evidence that cyber war is or is likely to

become a serious threat Their claim is empirically grounded involving a careful analysis of cyber incidents and disputes experienced by international states since 2001 and an examination of the processes leading to cyber conflict As the authors convincingly show cyber incidents are a little used tactic with low level intensity and few to no long term effects As well cyber incidents are motivated by the same dynamics that prompt regional conflicts Based on this evidence Valeriano and Maness lay out a set of policy recommendations for proper defense against cyber threats that is built on restraint and regionalism
