Electronic Healthcare Information Security Advances In Information Security:

Electronic Healthcare Information Security Charles A. Shoniregun, Kudakwashe Dube, Fredrick Mtenzi, 2010-11-03
The adoption of Information and Communication Technologies ICT in healthcare is driven by the need to contain costs while maximizing quality and efficiency. However, ICT adoption for healthcare information management has brought far reaching effects and implications on the spirit of the Hippocratic Oath, patient privacy and confidentiality. A wave of security breaches have led to pressing calls for opt in and opt out provisions where patients are free to choose to or not have their healthcare information collected and recorded within healthcare information systems. Such provisions have negative impact on cost efficiency and quality of patient care. Thus, determined efforts to gain patient trust is increasingly under consideration for enforcement through legislation, standards, national policy frameworks and implementation systems geared towards closing gaps in ICT security frameworks. The ever increasing healthcare expenditure and pressing demand for improved quality and efficiency in patient care services are driving innovation in healthcare information management. Key among the main innovations is the introduction of new healthcare practice concepts such as shared care, evidence based medicine, clinical practice guidelines and protocols, the cradle to grave health record and clinical workflow or careflow. Central to these organizational re engineering innovations is the widespread adoption of Information and Communication Technologies ICT at national and regional levels which has ushered in computer based healthcare information management that is centred on the electronic healthcare record EHR.

The 8th International Conference on Knowledge Management in Organizations Lorna Uden, Leon S.L. Wang, Juan Manuel Corchado Rodríguez, Hsin-Chang Yang, I-Hsien Ting, 2013-09-06
The proceedings from the eighth KMO conference represent the findings of this international meeting which brought together researchers and developers from industry and the academic world to report on the latest scientific and technical advances on knowledge management in organizations. This conference provided an international forum for authors to present and discuss research focused on the role of knowledge management for innovative services in industries to shed light on recent advances in social and big data computing for KM as well as to identify future directions for researching the role of knowledge management in service innovation and how cloud computing can be used to address many of the issues currently facing KM in academia and industrial sectors.

The Handbook of Information Security for Advanced Neuroprosthetics Matthew E. Gladden, 2017-02-20
How does one ensure information security for a computer that is entangled with the structures and processes of a human brain and for the human mind that is interconnected with such a device? The need to provide information security for neuroprosthetic devices grows more pressing as increasing numbers of people utilize therapeutic technologies such as cochlear implants, retinal prostheses, robotic prosthetic limbs and deep brain stimulation devices. Moreover, emerging neuroprosthetic technologies for human enhancement are expected to increasingly transform their human users' sensory, motor and cognitive capacities in ways that generate new posthumanized sociotechnological realities. In

this context it is essential not only to ensure the information security of such neuroprostheses themselves but more importantly to ensure the psychological and physical health autonomy and personal identity of the human beings whose cognitive processes are inextricably linked with such devices InfoSec practitioners must not only guard against threats to the confidentiality and integrity of data stored within a neuroprosthetic device's internal memory they must also guard against threats to the confidentiality and integrity of thoughts memories and desires existing within the mind of the device's human host This second edition of The Handbook of Information Security for Advanced Neuroprosthetics updates the previous edition's comprehensive investigation of these issues from both theoretical and practical perspectives It provides an introduction to the current state of neuroprosthetics and expected future trends in the field along with an introduction to fundamental principles of information security and an analysis of how they must be re-envisioned to address the unique challenges posed by advanced neuroprosthetics A two-dimensional cognitional security framework is presented whose security goals are designed to protect a device's human host in his or her roles as a sapient metavolitional agent embodied embedded organism and social and economic actor Practical consideration is given to information security responsibilities and roles within an organizational context and to the application of preventive detective and corrective or compensating security controls to neuroprosthetic devices their host device systems and the larger supersystems in which they operate Finally it is shown that while implantable neuroprostheses create new kinds of security vulnerabilities and risks they may also serve to enhance the information security of some types of human hosts such as those experiencing certain neurological conditions

Neuroprosthetic Supersystems Architecture Matthew E. Gladden, 2017-05-13 This volume serves as a resource for the design and analysis of neuroprosthetic supersystems which can be defined as organizations either small or large simple or complex whose human members have been neuroprosthetically augmented While numerous other texts focus on the biomedical engineering of neuroprostheses as technological devices or on the biocybernetic engineering of the host device system comprising a neuroprosthesis and its human host this volume presents a unique investigation of the intentional creation of higher order supersystems that allow multiple neuroprosthetically augmented human beings to interact with one another and with external information systems in order to accomplish some shared task In essence this can be understood as the work of designing and managing neuroprosthetically enhanced organizations Individual chapters present an ontology of the neuroprosthesis as a computing device a biocybernetic ontology of the host device system an ontology of the neuroprosthesis as an instrument of cyborgization motivating and inhibiting factors for the organizational deployment of posthumanizing neuroprostheses by military organizations and other early adopters an introduction to enterprise architecture in the context of technological posthumanization an exploration of the implications of neuroprosthetic augmentation for enterprise architecture and

considerations for the development of effective network topologies for neuroprosthetically augmented organizations The conceptual frameworks formulated within this book offer a wide range of tools that can be of use to policymakers ethicists neuroprosthetic device manufacturers organizational decision makers and others who must analyze or manage the complex legal ethical and managerial implications that result from the use of emerging neuroprosthetic technologies within an organizational context *IoT and Cloud Computing-Based Healthcare Information Systems* Anand Sharma,Hiren Kumar Deva Sarma,S. R. Biradar,2023-07-07 This new volume features new and innovative research on the positive contributions of IoT and cloud technology in healthcare information systems for the improvement of patient care and disease management highlighting the challenges and difficulties along with solutions and strategies The authors focus on theories systems methods algorithms and applications and showcase the interface between e health and communication technologies and their beneficial contribution to building efficient and secure healthcare information systems Healthcare information systems involve data generation compilation arrangement examination and synthesis and communication and use This incorporates frameworks that gather store maintain and protect patients electronic medical information and records providing an invaluable resource for supporting medical services strategies and choices This volume discusses a multitude of diverse new information technologies in telemedicine in security for healthcare systems for medical image authentication in pulse oximetry via Bluetooth for virus detection via smartphones for tumor extraction via extreme learning machine and k means clustering for the detection of cancerous cells for music therapy for mental health purposes and much more

CROSS-INDUSTRY CYBER DEFENSE: ADVANCED TECHNIQUES FOR IT, MEDICAL, AND FINANCIAL SECURITY

Venkatesh Kodela,2025-05-23 The fast development of digital technologies has dissolved traditional barriers across industries in today s interconnected world elevating the need of cross sector cybersecurity to the level of an absolute requirement There is growing interdependence and susceptibility to complex assaults in the information technology IT healthcare HR and banking FIN industries all of which have their own set of challenges regulatory mandates and distinct threat vectors Cross Industry Cyber Defence Advanced Techniques for IT Medical and Financial Security is an attempt to investigate and compile the state of the art tactics and resources needed to protect these vital sectors This work promotes an approach to security that is more integrated robust and intelligence driven and it fosters collaboration across sectors as opposed to traditional frameworks that generally function in silos It stresses the significance of proactive threat detection compliance and governance while diving into the details of securing IT infrastructure safeguarding sensitive health data under HIPAA and associated regulations and strengthening financial networks against fraud and interruption This volume seeks to equip stakeholders cybersecurity professionals lawmakers researchers and organisational leaders to reevaluate defence architectures close industry gaps and construct an ecosystem resilient to present and future digital risks in an era where cyber threats are changing at a faster rate than regulatory frameworks Handbook of Research on Advancing

Cybersecurity for Digital Transformation Sandhu, Kamaljeet, 2021-06-18 Cybersecurity has been gaining serious attention and recently has become an important topic of concern for organizations government institutions and largely for people interacting with digital online systems As many individual and organizational activities continue to grow and are conducted in the digital environment new vulnerabilities have arisen which have led to cybersecurity threats The nature source reasons and sophistication for cyberattacks are not clearly known or understood and many times invisible cyber attackers are never traced or can never be found Cyberattacks can only be known once the attack and the destruction have already taken place long after the attackers have left Cybersecurity for computer systems has increasingly become important because the government military corporate financial critical infrastructure and medical organizations rely heavily on digital network systems which process and store large volumes of data on computer devices that are exchanged on the internet and they are vulnerable to continuous cyberattacks As cybersecurity has become a global concern it needs to be clearly understood and innovative solutions are required The Handbook of Research on Advancing Cybersecurity for Digital Transformation looks deeper into issues problems and innovative solutions and strategies that are linked to cybersecurity This book will provide important knowledge that can impact the improvement of cybersecurity which can add value in terms of innovation to solving cybersecurity threats The chapters cover cybersecurity challenges technologies and solutions in the context of different industries and different types of threats This book is ideal for cybersecurity researchers professionals scientists scholars and managers as well as practitioners stakeholders researchers academicians and students interested in the latest advancements in cybersecurity for digital transformation
