McMillan,David Beevis,Eduardo Salas,2013-06-29 The human factors profession is currently attempting to take a more proactive role in the design of man

machine systems than has been characteristic of its past. Realizing that human engineering contributions are needed well before the experimental evaluation of prototypes or operational systems, there is a concerted effort to develop tools that predict how humans will interact with proposed designs. This volume provides an overview of one category of such tools: mathematical models of human performance. It represents a collection of invited papers from a 1988 NATO Workshop. The Workshop was conceived and organized by NATO Research Study Group 9 (RSG 9) on Modelling of Human Operator Behaviour in Weapon Systems. It represented the culmination of over five years of effort and was attended by 139 persons from Europe, Canada, and the United States. RSG 9 was established in 1982 by Panel 8 of the Defence Research Group to accomplish the following objectives: Determine the utility and state of the art of human performance modelling; Encourage international research and the exchange of ideas; Foster the practical application of modelling research; Provide a bridge between the models and approaches adopted by engineers and behavioral scientists; Present the findings in an international symposium.

Tribology and Dynamics of Engine and Powertrain Homer Rahnejat, 2010-09-30. Tribology, the science of friction, wear, and lubrication, is one of the cornerstones of engineering's quest for efficiency and conservation of resources. *Tribology and dynamics of engine and powertrain: fundamentals, applications, and future trends* provides an authoritative and comprehensive overview of the disciplines of dynamics and tribology using a multi-physics and multi-scale approach to improve automotive engine and powertrain technology. Part one reviews the fundamental aspects of the physics of motion, particularly the multi-body approach to multi-physics multi-scale problem solving in tribology. Fundamental issues in tribology are then described in detail, from surface phenomena in thin film tribology to impact dynamics, fluid film and elastohydrodynamic lubrication, means of measurement and evaluation. These chapters provide an understanding of the theoretical foundation for Part II, which includes many aspects of the physics of motion at a multitude of interaction scales, from large displacement dynamics to noise and vibration tribology, all of which affect engines and powertrains. Many chapters are contributed by well-established practitioners disseminating their valuable knowledge and expertise on specific engine and powertrain sub-systems. These include overviews of engine and powertrain issues, engine bearings, piston systems, valve trains, transmission, and many aspects of drivetrain systems. The final part of the book considers the emerging areas of microengines and gears, as well as nano-scale surface engineering. With its distinguished editor and international team of academic and industry contributors, *Tribology and dynamics of engine and powertrain* is a standard work for automotive engineers and all those researching NVH and tribological issues in engineering. Reviews fundamental aspects of physics in motion, specifically the multi-body approach to multi-physics. Describes essential issues in tribology from surface phenomena in thin film tribology to impact dynamics. Examines specific engine and powertrain sub-systems, including engine bearings, piston systems, and valve trains.
