Sacchetti, 2013-03-07 The clinical biochemistry of hepatobiliary diseases is very widely studied and publications abound on
this topic However there is no recent publication that provides a comprehensive collection of the various leading aspects that

on the various clinical biochemistry aspects of these disorders in order that they might discuss their experience and expertise
The aim of the International Satellite Symposium on Clinical Biochemistry in Hepatobiliary Disease in addition to reviewing
the individual aspects was to describe the state of the art so as to provide useful data for laboratory scientists and also for
physicians working in the field of hepatobiliary diseases and these two aims are clearly reflected in the chapters of this

emphasized in laboratory medicine i.e. strategies to integrate information coming from the laboratory to make them more
useful for clinical diagnosis
