Propp, 2013-12-03 Psychology means the study of the soul it is the social science concerned with investigating who we are why we have certain feelings and why we do the things we do Are we no more than a vast assembly of nerve cells and their associated molecules Is biology our genetic inheritance destiny or does social upbringing play a crucial role What are the roles played by Nature and by Nurture Are we purely physical beings or is there an aspect that can be called spiritual This thought provoking novel takes you on a journey of intellectual and emotional exploration considering along the way questions that we've all asked ourselves such as Is it true that we only use 10% of our brains Does playing classical music for infants increase their intelligence Do crime rates go up during a full moon Can hypnosis or post hypnotic suggestions make us do something we wouldn't normally do Does subliminal advertising influence us to buy products Are our memories stored indelibly almost like a tape recorder What causes memory lapses as we age Can repressed traumatic memories be recovered through hypnosis Do some people have multiple personalities How can I tell if someone has a neurosis or a psychosis Do men have an inner feminine side and women an inner masculine Are there innate psychological differences between males and females The four main characters in this book will guide you through a diverse and sometimes bewildering world of differing approaches to answering such questions such as Freudian Jungian and Adlerian Humanistic Existential and Transpersonal as well as Cognitive Emotive and Behaviorist Along the way you will learn about the developmental stages proposed by psychologists such as Erikson Kohlberg Piaget and Fowler and even explore some of the questions currently being asked by both neuroscientists and philosophers of the mind Start reading to begin your study of our innermost selves **The Abused and the Abuser** Warwick Middleton, Adah Sachs, Martin J. Dorahy, 2019-10-23 Severe abuse often occurs in settings where the grouping whether based around a family or a community organisation or institution outwardly appears to be very respectable The nature of attachment dynamics allied with threat discrediting the manipulation of the victim's dissociative defences long term conditioning and the endless invoking of shame mean that sexual physical and emotional abuse may in some instances be

essentially unending Even when separation from the long term abuser is attempted it may initially be extremely difficult to achieve and there are some individuals who never achieve this parting Even when the abuser is dead the intrapsychic nature of the enduring attachment experienced by their victim remains complicated and difficult to resolve This volume includes multiple perspectives from highly experienced clinicians researchers and writers on the nature of the relationship between the abused and their abuser s No less than five of this international grouping of authors have been president of the International Society for the Study of Trauma and Dissociation the world s oldest international trauma society This book which opens with a highly original clinical paper on weaponized sex by Richard Kluft one of the foremost pioneers of the modern dissociative disorders field concludes with a gripping historical perspective written by Jeffrey Masson as he reengages with issues that first brought him to worldwide prominence in the 1980s Between these two pieces the contributors all highly acclaimed for their clinical theoretical or research work present original cutting edge work on this complex subject This book was originally published as a double special issue of the Journal of Trauma and Dissociation

European Thought and Culture, 1350-1992 Michael J. Sauter, 2021-06-06 This book explores the main currents of European thought between 1350 and 1992 which it approaches in two principal ways culture as produced by place and the progressive unmooring of thought from previously set religious and philosophical boundaries The book reads the period against spatial thought s history spatial sciences such as geography or Euclidean geometry to argue that Europe cannot be understood as a continent in intellectual terms or its history organized with respect to traditional spatial geographic categories Instead we need to understand European intellectual history in terms of a culture that defined its own place as opposed to a place that produced a given culture It then builds on this idea to argue that Europe s overweening drive to know more about humanity and the cosmos continually breached the boundaries set by venerable religious and philosophical traditions In this respect spatial thought foregrounded the human at the unchanging s expense with European thought slowly becoming unmoored as it doggedly produced knowledge at wisdom s expense Michael J Sauter illustrates this by pursuing historical themes across different chapters including European thought s exit from the medieval period the Renaissance the Reformation the Scientific Revolution the Enlightenment and Romanticism the Industrial Revolution and war and culture offering a thorough overview of European thought during this period The book concludes by explaining how contemporary culture has forgotten what early modern thinkers such as Michel de Montaigne still knew namely that too little skepticism toward one s own certainties makes one a danger to others Offering a comprehensive introduction to European thought that stretches from the late fourteenth to the late twentieth century this is the perfect one volume study for students of European intellectual history

Memory and Healing Soren R. Ekstrom, 2018-05-01 This book addresses the current demand to apply findings in neuroscience to a broad spectrum of

psychotherapy practices It offers clear formulations for what has long been missing in how psychotherapists present their work research based descriptions of specific memory functions and attention to the role that synaptic plasticity and neural integration play in making lasting psychological change possible The book provides a detailed perspective on how patients integrate into their own narratives what transpires in their treatment and how the clinician s memory guides the different phases of the process of healing Long neglected in psychotherapeutic formulations findings about memory in particular episodic and autobiographical memory have a direct bearing on what happens in treatments Whether the information is about the recent past such as what happened between sessions or about traumatic childhood experiences the patient s disclosures are in the service of a more complete narrative about self At the same time the therapist s ways of remembering what occurs in each therapeutic relationship will guide much of the healing process for the patient
