Tucker,Nancy D. Anderson,2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

Poetic Logic and the Origins of the Mathematical Imagination Marcel Danesi,2023-09-02 This book treats eighteenth century Italian philosopher Giambattista Vico s theory of poetic logic for the first time as the originating force in mathematics transforming instinctive counting and spatial perception into poetic metaphorical symbolism that dovetails with the origin of language It looks at current work on mathematical cognition from Lakoff and N ez to Butterworth Dehaene and beyond matching it against the poetic logic paradigm In a sense it continues from where Kasner and Newman left off connecting contemporary research on the mathematical mind to the idea that the products of early mathematics were virtually identical to the first forms of poetic language As such this book informs the current research on mathematical cognition from a different angle by looking back at a still relatively unknown philosopher within mathematics The aim of this volume is to look broadly at what constitutes the mathematical mind through the Vichian lens of poetic logic Vico was among the first to suggest that the essential nature of mind could be unraveled indirectly by reconstructing the sources of its modifications his

term for creations that is by examining the creation and function of symbols words and all the other uniquely human artifacts including mathematics the mind has allowed humans to establish the world of civil society Vico s term for culture and civilization The book is of interest to cognitive scientists working on math cognition It presents the theory of poetic logic as Vico articulated it in his book The New Science examining its main premises and then applying it to an interpretation of the ongoing work in math cognition It will also be of interest to the general public since it presents a history of early mathematics through the lens of an idea that has borne fruit in understanding the origin of language and symbols more broadly **Complexity and Creative Capacity** Kelly Chapman,2015-11-06 Complexity theories gained prominence in the 1990s with a focus on self organising and complex adaptive systems Since then complexity theory has become one of the fastest growing topics in both the natural and social sciences and touted as a revolutionary way of understanding the behaviour of complex systems This book uses complexity theory to surface and challenge the deeply held cultural assumptions that shape how we think about reality and knowledge In doing so it shows how our traditional approaches to generating and applying knowledge may be paradoxically exacerbating some of the wicked environmental problems we are currently facing The author proposes an innovative and compelling argument for rejecting old constructs of knowledge transfer adaptive management and adaptive capacity The book also presents a distinctively coherent and comprehensive synthesis of cognition learning knowledge and organizing from a complexity perspective It concludes with a reconceptualization of the problem of knowledge transfer from a complexity perspective proposing the concept of creative capacity as an alternative to adaptive capacity as a measure of resilience in socio ecological systems Although written from an environmental management perspective it is relevant to the broader natural sciences and to a range of other disciplines including knowledge management organizational learning organizational management and the philosophy of science *Mathematical Reviews* ,2001 Featured Reviews in "Mathematical Reviews" 1995-1996 Donald G. Babbitt,Jane E. Kister, This collection of reprinted Featured Reviews published in Mathematical Reviews MR in 1995 and 1996 makes widely available informed reviews of some of the best mathematics published recently Featured Reviews were introduced in MR at the beginning of 1995 in part to provide some guidance to the current research level literature With the exponential growth of publications in mathematical research in the first half century of MR it had become essentially impossible for users of MR to identify the most important new research level books and papers especially in fields outside of the users own expertise This work identifies some of the best new publications papers and books that are expected to have a significant impact on the area of pure or applied mathematics with which researchers are concerned All of the papers reviewed here contain interesting new ideas or applications a deep synthesis of existing ideas or any combination of these The volume is intended to lead the user to important new research across all fields covered by MR **Catalogue** American Mathematical Society,2000 *European Congress of Mathematics* Carles Casacuberta,Rosa M.
