High-level Feedback Control With Neural Networks Young Ho Kim, Frank L Lewis,1998-09-28 Complex industrial or robotic systems with uncertainty and disturbances are difficult to control As system uncertainty or performance requirements increase it becomes necessary to augment traditional feedback controllers with additional feedback loops that effectively add intelligence to the system Some theories of artificial intelligence AI are now showing how complex machine systems should mimic human cognitive and biological processes to improve their capabilities for dealing with uncertainty This book bridges the gap between feedback control and AI It provides design techniques for high level neural network feedback control topologies that contain servo level feedback control loops

as well as AI decision and training at the higher levels Several advanced feedback topologies containing neural networks are presented including dynamic output feedback reinforcement learning and optimal design as well as a fuzzy logic reinforcement controller The control topologies are intuitive yet are derived using sound mathematical principles where proofs of stability are given so that closed loop performance can be relied upon in using these control systems Computer simulation examples are given to illustrate the performance
