efficiency for many process applications It introduces the theory behind the most common types of controllers used in the process industries and provides various additional plant automation related subjects The new edition also includes new homework problems and examples including multiple choice questions for flipped classes information about statistical process control and a new case study that documents the development of regulatory control schemes for an entire process area Aimed at chemical engineering students in process control courses as well as practicing process and control engineers this textbook offers an alternative to traditional texts and offers a practical hands on approach to design of process controls PowerPoint lecture slides multiple choice quiz questions for each chapter and a solutions manual are available to qualifying instructors Tutorial style videos for most of the text examples are available for all readers to download [Solutions Manual to Accompany Design of Feedback Control Systems](#) Raymond T.
